HINT – SHEET

SUBJECT : PHYSICS

SECTION-A

4. Ans (1)

Electric field due to an arc $= \dfrac{2K\lambda}{r}\sin\dfrac{\alpha}{2}$

6. Ans (1)

$q \propto$ no. of electric field lines.

7. Ans (2)

Tangent gives direction of force on charge particle.

8. Ans (4)

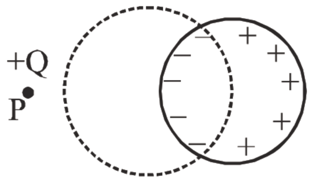
$\phi = \int \vec{E}\,.\,\vec{dA} = \int E\ dA\ \cos\theta$

Here $(\theta = 90°)$

9. Ans (1)

Along the axis of coil $\vec{v}$ and $\vec{B}$ are parallel, so $F = 0$

10. Ans (3)



Charge induction on metallic sphere because of point charge.

11. Ans (4)

Total flux linked with cube $\Phi = \dfrac{q}{8\varepsilon_0}$. Flux through three faces on the corner of which charge is placed is zero. The flux through any one of the other faces is equally divided so it is

$\phi = \dfrac{1}{3}\Phi = \dfrac{1}{3}\cdot\dfrac{q}{8\varepsilon_0} = \dfrac{q}{24\varepsilon_0}$

12. Ans (1)

$\phi = \dfrac{\lambda l_{enclosed}}{\epsilon_0}$

$= \dfrac{8.85\times10^{-6}\times5}{8.85\times10^{-12}} = 5\times10^{6}$ V-m

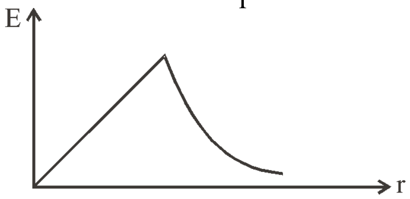
13. Ans (2)

For cunductor

$E(r<R) = 0$

14. Ans (3)

$(E_{in}) \propto r \quad E_{out} \propto \frac{1}{r^2}$



15. Ans (1)

$U = U_{12} + U_{13} + U_{23}$

$$= \frac{KQ(2q)}{a} + \frac{KQ(-q)}{a} + \frac{K(2q)(-q)}{a} = 0$$

$$\Rightarrow \frac{KQq}{a} = \frac{2Kq^2}{a}$$

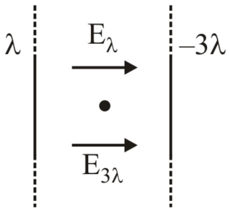
$Q = 2q$

16. Ans (2)

$q_{in} = q_1 + q_2 + q_3$

and $\oint \vec{E}.d\vec{A} = \frac{q_{in}}{\varepsilon_0}$ where $\vec{E} = \vec{E}_1 + \vec{E}_2 + \vec{E}_3 + \vec{E}_4$

17. Ans (2)



$E_{net} = E_\lambda + E_{3\lambda}$

$$= \frac{2k\lambda}{r} + \frac{2k(3\lambda)}{r}$$

$$= \frac{8k\lambda}{r}$$

18. Ans (4)

From conservation of mechaincal energy

$(KE + PE)_{\text{minimum sepration}} = (KE + PE)_{\text{far away}}$

$$\Rightarrow 0 + \frac{1}{4\pi\varepsilon_0}\frac{Q^2}{r_{min}} = \frac{1}{2}mv^2 + 0$$

$$\Rightarrow r_{min} \propto \frac{1}{v^2} \Rightarrow r_{min} \propto v^{-2}$$

19. Ans (1)

$r = 30$ cm (point outside)

$$E = \frac{KQ}{r^2} = \frac{9 \times 10^9 \times 3.2 \times 10^{-7}}{9 \times 10^{-2}} = 3.2 \times 10^4 \text{ N/c}$$

20. Ans (3)

Wavelength of red light is more than violet light. Refractive index of a medium is different for light rays of different wave lengths. Larger the wavelengths, the lesser are refractive index.

Now angle of minimum deviation increases with increment in refractive index,

$\delta = (\mu - 1)A$

Angle of minimum deviation for red light is less than the violet.

21. Ans (3)

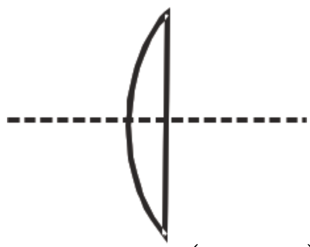
$\delta_m = A$

$$\mu = \frac{\sin\left(\frac{A+\delta_m}{2}\right)}{\sin\left(\frac{A}{2}\right)} = 2\cos(A/2)$$

$\sqrt{3} = 2\cos(A/2)$

$A = 60°$

22. Ans (4)



$$\frac{1}{f} = ({}_a\mu_g - 1)\left(\frac{1}{R} - \frac{1}{\infty}\right) \Rightarrow \quad (1.6 - 1)$$

$$\left(\frac{1}{f}\right) = \frac{6}{150}$$

$$P = \frac{100}{f(cm)} D = 100 \times \frac{6}{150} = 4D$$

23. Ans (1)

$$\mu = \cos ec\frac{A}{2}, \mu = \frac{\sin \frac{\delta_{min} + \angle A}{2}}{\sin \frac{\angle A}{2}}$$

$$\Rightarrow \text{cosec}\frac{A}{2} = \frac{\sin \frac{\delta_{min} + \angle A}{2}}{\sin \frac{A}{2}}$$

$$\sin\frac{\delta_{min} + A}{2} = 1, \quad \frac{\delta_{min} + \angle A}{2} = 90°$$

$$\Rightarrow \delta_{min} = 180° - \angle A$$

24. Ans (3)

Since there will be no refraction from P to Q and then from Q to R (all being identical). Hence, the ray will not have the same deviation as before the point n, n' being same for the ray.

25. Ans (4)

$f_w = 4 \times 0.15 = 0.6$ m

26. Ans (2)

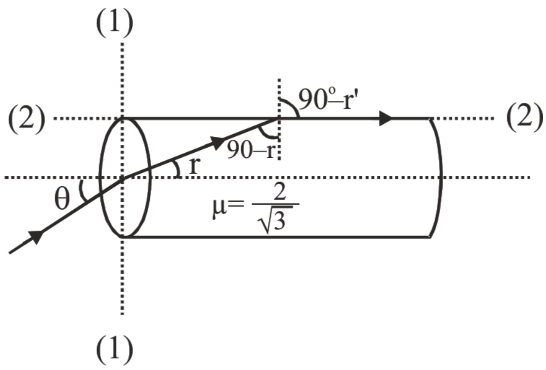
For glass - water interface ${}_g\mu_w = \dfrac{\sin i}{\sin r}$ ...(i)

For water - air interface ${}_w\mu_a = \dfrac{\sin r}{\sin 90^\circ}$ ...(ii)

$\Rightarrow {}_g\mu_w \times {}_w\mu_a = \dfrac{\sin i}{\sin r} \times \dfrac{\sin r}{\sin 90^\circ} = \sin i$

$\Rightarrow \dfrac{\mu_w}{\mu_g} \times \dfrac{\mu_a}{\mu_w} = \sin i \Rightarrow \mu_g = \dfrac{1}{\sin i}$

27. Ans (4)



Refraction at (1) – (1)

$1 \times \sin\theta = \mu \sin r = \dfrac{2}{\sqrt{3}} \sin\ r$

$\sin r = \dfrac{\sqrt{3}}{2} \sin\theta$

$\sin C = \dfrac{1}{\mu} = \dfrac{1}{2/\sqrt{3}} = \dfrac{\sqrt{3}}{2} \Rightarrow C = 60^o$

Refraction at (2) – (2)

$r' = 90^\circ$ i.e. $i = 90^\circ - r = C$

$90^\circ - r = 60^\circ \Rightarrow r = 30^\circ$

$\sin r = \dfrac{\sqrt{3}}{2} \sin\theta \Rightarrow \sin 30^o = \dfrac{\sqrt{3}}{2} \sin\theta$

$\sin\theta = \dfrac{1}{\sqrt{3}} \Rightarrow \theta = \sin^{-1}(1/\sqrt{3})$

28. Ans (1)

$\mu = \dfrac{1}{\sin i_c} = \dfrac{1}{\sin 45^\circ} = \sqrt{2} = 1.414$

$\because (\mu_{red} = 1.39) < \mu,\ \mu_v > \mu\ ;\ \mu_g > \mu$

only red colur do not suffer total internal reflection.

29. Ans (3)

From figure given in question $\theta = 2c = 98^\circ$.

30. Ans (3)

$P = P_1 + P_2$

$= \dfrac{100}{f_1} + \dfrac{100}{f_2} = \dfrac{100}{40} - \dfrac{100}{20} = 2.5 - 5$

$P = -2.5$ D

31. Ans (1)

$\dfrac{1}{v} - \dfrac{1}{-\frac{f}{2}} = \dfrac{1}{f}$

$\dfrac{1}{v} = \dfrac{1}{f} - \dfrac{2}{f} = -\dfrac{1}{f}$

or $v = -f$

Again $m = \dfrac{v}{u} = \dfrac{-f}{-\frac{f}{2}} = 2$

Clearly, the image is virtual and doubles the size

32. Ans (2)

$\dfrac{1}{F} = \dfrac{1}{f_1} + \dfrac{1}{f_2} - \dfrac{d}{f_1 f_2}$

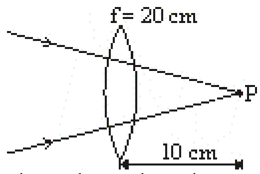
$\therefore \dfrac{1}{\infty} = \dfrac{1}{20} + \dfrac{1}{-5} - \dfrac{d}{20(-5)}$

$\Rightarrow 0 = \dfrac{1}{20} - \dfrac{1}{5} + \dfrac{d}{100}$

$\therefore \dfrac{d}{100} = \dfrac{1}{5} - \dfrac{1}{20} = \dfrac{20-5}{100}$

$\therefore d = 15$cm

33. Ans (3)



$\dfrac{1}{v} - \dfrac{1}{u} = \dfrac{1}{f}\ ;\ \dfrac{1}{v} - \dfrac{1}{+10} = \dfrac{1}{20}$

$\dfrac{1}{v} = \dfrac{1}{20} + \dfrac{1}{10} = \dfrac{1+2}{20}$

$v = \dfrac{20}{3}$cm

34. Ans (1)

Using $P = P_1 + P_2 - d \times P_1 P_2$

for equivalent power to be negative

$d \times P_1 P_2 > P_1 + P_2 \Rightarrow d \times 25 > 10$

$\Rightarrow d > \dfrac{10}{25}$m $\Rightarrow d > v \Rightarrow d > 40$cm

35. Ans (2)

If outer refractive index is same as the inner refractive index of lens then focal length is infinite.

SECTION-B

37. Ans (4)

$$\vec{E}_P = \vec{E}_{\sigma} + \vec{E}_{-2\sigma} + \vec{E}_{-\sigma} = \frac{1}{2\varepsilon_0}[\sigma\hat{k} - 2\sigma\hat{k} - \sigma\hat{k}]$$

$$\vec{E}_P = \frac{-\sigma}{\varepsilon_0}\hat{k}$$

38. Ans (1)

$dq = \lambda dx$

$$= \int_0^{\ell} \lambda_0 x^2 dx = \frac{\lambda_0 \ell^3}{3}$$

39. Ans (1)

(i) $E = \frac{\lambda}{2\pi\varepsilon_0 r}$

(ii) Inside electric field, E = 0

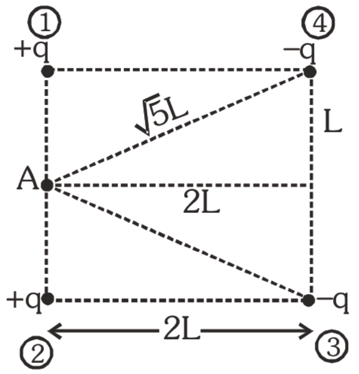
(iii) $E = \frac{\rho r}{3\varepsilon_0}$

(iv) $E = \frac{\lambda r}{2\pi\varepsilon_0 R^2}$

40. Ans (1)

$$\frac{1}{2}mv^2 = \frac{q_1 q_2}{4\pi\varepsilon_0}\left(\frac{1}{r_i} - \frac{1}{r_f}\right)$$

41. Ans (3)



$$V_A = \frac{Kq}{L} + \frac{Kq}{L} + \frac{K(-q)}{\sqrt{5}L} + \frac{K(-q)}{\sqrt{5}L}$$

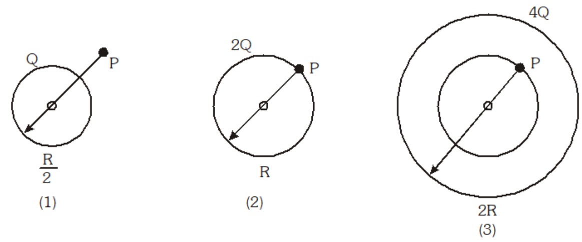
$$= \frac{1}{4\pi\epsilon_0}\frac{2q}{L}\left[1 - \frac{1}{\sqrt{5}L}\right]$$

42. Ans (2)

$$V = \frac{kQ}{R} + \frac{k(3Q)}{R} + \frac{k(-2Q)}{R}$$

$$= \frac{2kQ}{R} = \frac{Q}{2\pi\varepsilon_0 R}$$

43. Ans (3)



$$\frac{KQ}{R^2} \qquad \frac{K.2Q}{R^2} \qquad \frac{K.(4q)R}{(2R)^3} \quad \frac{Kq}{2k^2}$$

$E_2 > E_1 > E_3$

44. Ans (3)

$\delta = (\mu - 1) A$

$34 = (\mu - 1) A$ ....(1)

After bnocked off.

$\delta^1 = (\mu - 1) A/2$

$= \frac{34}{2} = 17°$

45. Ans (2)

In each case two plano-convex lens are placed close to each other, and $\frac{1}{F} = \frac{1}{f_1} + \frac{1}{f_2}$

46. Ans (3)

$$\omega = \frac{1.67 - 1.63}{1.65 - 1} = \frac{0.04}{.65} = \frac{4}{65} = 0.0615$$

47. Ans (1)

We have to consider sign convention as only magnitude of focal length is given.

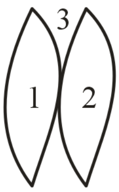
If f_1 is focal length of convex(converging) lens and f_2 is focal length of concave (Diverging) lens. Then their equivalent focal length F would be

$$\left[\because \frac{1}{F} = \frac{1}{f_1} + \frac{1}{f_2}\right]$$

$$\frac{1}{F} = \frac{1}{f_1} + \frac{1}{-f_2} = \frac{f_2 - f_1}{f_1 f_2}$$

$$\therefore F = \frac{f_1 f_2}{f_2 - f_1}$$

48. Ans (4)



$f_1 = f_2 = 20$ cm

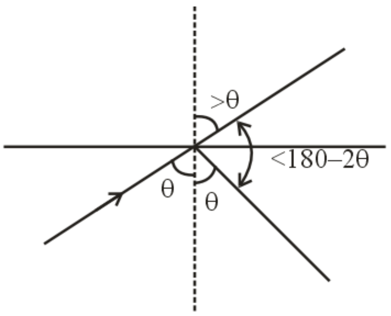
$R = 20$ cm

$f_3 = \frac{-R}{2(\mu-1)} = = \frac{-20}{2(4/3-1)} - 30$ cm

$\frac{1}{F} = \frac{1}{20} + \frac{1}{20} + \frac{1}{(-30)}$

$= 15$ cm

49. Ans (3)



$\delta = 180°$

50. Ans (3)

$\sin i = \mu_2 \sin r_1$

$\sin i = (\mu) \sin(A)$

$\therefore r^2 = 0$

$r_1 + r_2 = A$

$Y_A = \frac{108 \times \frac{1}{2}}{72} = 0.75$

75. Ans (1)

In solution, the surface has both solute and solvent molecules, thereby the fraction of the surface covered by the solvent molecules get reduced. Consequently, the number of solvent molecules escaping from the surface is reduced, thus vapour pressure of the solution is also reduced.
