The Biggest Event

for IIT JEE, NEET UG and Foundation

Big Surprises | Mega Rewards | Endless Fun

March 1 **7 PM - 9 PM**

Live on Unacademy NEET

1. Which of the following type of neurons are present in embryonic stage :

(1) Unipolar

(2) Bipolar

(3) Nonpolar

(4) Multipolar

2. Melatonin is a hormone secreted by :

(1) Pituitary gland

(2) Pineal gland

(3) Thymus gland

(4) Adrenal cortex

3. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R)

Assertion (A) : The PNS comprises all the nerves of the body associated with the CNS.

ANS

Reason (R) : The PNS is further classified in to SNS and ~~PSNS~~ x

Choose the correct answer from the options given below :

(1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)

(2) (A) is correct but (R) is not correct

(3) (A) is not correct but (R) is correct

(4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

4. The correct sequence of meninges of spinal-cord from inside to outside is:

(1) Dura mater Arachnoid Pia mater

(2) Arachnoid Dura mater Pia mater

(3) Pia mater Arachnoid Dura mater

(4) Dura mater Pia mater Arachnoid

V.Imp

5. Match the hormone with the roles given under. Select the choice in which the alphabets of the two columns are correctly matched :

Hormones	Roles
a. FSH	i. Preparation of endometrium for implantation
b. LH	ii. Female secondary sexual characters
c. Progesterone	iii. Contraction of uterine muscles
d. Estrogen	iv. Development of corpus luteum
	v. Maturation of Graafian follicle

(1) a-ii, b-iv, c-i, d-iii
(2) a-v, b-i, c-iv, d-ii
(3) a-iii, b-v, c-iv, d-ii
(4) a-v, b-iv, c-i, d-ii

6. Mad cow disease in cattle caused by an agent which has:

Prions = virus

(1) Polyhedraly arrenged protein

(2) Smaller size than bacteria

(3) Abnormally folded protein

(4) 2 and 3

Based on Floral character

7 **Plant families like convolvulaceae, solanaceae are included in which order :**

(1) Poales

(2) Poaceae

(3) Polymoniales

(4) Sapindales

8. As we go from kingdom to species in a taxonomic hierarchy, the number of common characteristics:

(1) Will decrease

(2) Will increase

(3) Remain same

(4) May increase or decrease

9. Match the following column I and column II :

Column I	Column II
(i) Mango	(a) *Felis*
(ii) Leopard	(b) *Mangifera indica*
(iii) Tiger	(c) *Panthera pardus*
(iv) Cat	(d) *Panthera tigris*

(1) i-b, ii-c, iii-d, iv-a

(2) i-a, ii-c, iii-d, iv-b

(3) i-c, ii-b, iii-d, iv-a

(4) i-c, ii-b, iii-a, iv-d

ORDER

10. Given below are two statements :

Statement I : Poales has the same status as diptera in terms of rank

Statement II : Biodiversity is known as the number and types of organisms present on earth

Choose the correct answer from the options given below

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both, Statement I and Statement II are correct

11. Asexual spore are produced exogenously in ....A........ and endogenously in ....B......:

2025

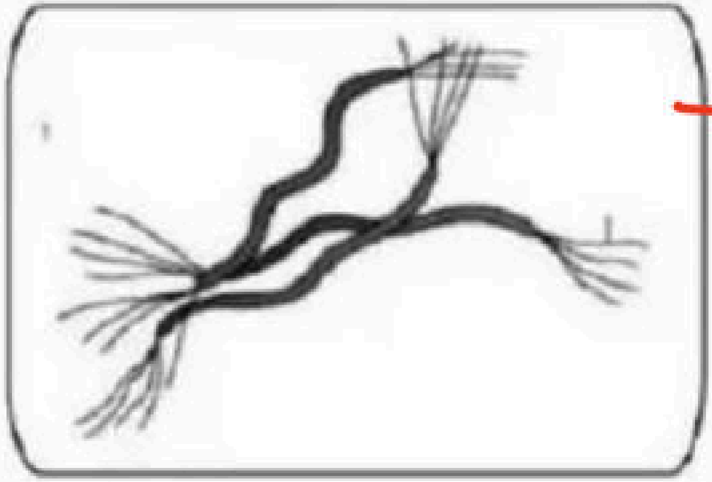
(1) A – Ascomycetes, B – Phycomycetes

(2) A – Basidiomycetes, B – Ascomycetes

(3) A – Ascomycetes, B – Basidiomycetes

(4) A – Basidiomycetes, B – Phycomycetes

12. Number of statement which are correct for given organism:



→ spirillum

(a) It belongs to kingdom protista ✗

(b) It belongs to kingdom monera ✓

(c) It is multicellular organism ✗

(d) It is a algae ✗

✓(1) 1 (2) 3

(3) 4 (4) 2

13. Given below are two statements :

Statement I : Skeletal muscle are closely associated with the skeletal components of the body.

Statement II : Based on appearance, cardiac muscles are striated.

Choose the correct answer from the options given below

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both, Statement I and Statement II are correct

14. **Which type of the joint allow limited movement :**

(1) Saddle joint

(2) Cartilaginous joints

(3) Fibrous joints = No movement

(4) Gliding joint

15. Which of the following is/are correct :

(1) A complex protein troponin is distributed at regular intervals on tropomyosin

(2) Progressive degeneration of skeletal muscle mostly due to genetic disorder is called muscular dystrophy

(3) Inflamation of joints due to accumulation of uric acid crystals is called gout

(4) All of these

16. **Which is a unit of muscle contraction :**

(1) A band

(2) Sarcomere

(3) Actin filament

(4) Myosin filament

17. ATPase enzyme, essential for muscle contraction is found in :-

(1) Actin

(2) Myosin

(3) Troponin

(4) Tropomyosin

18. In human body, which one of the following is "anatomically correct": → 11th and 12th

(1) Floating ribs – 2 pairs

(2) Collar bones – ~~3 pairs~~ 1

(3) Salivary gland – 1 pair x

(4) Cranial nerves – 10 pairs (Frog)

19. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R)

Assertion (A) : Visceral muscles are located in the inner wall of hollow visceral organ in the body.

No

Reason (R) : Visceral muscles exhibit straition and are smooth in appearance.

In the light of the above statements, choose the correct answer from the options given below :

(1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)

(2) (A) is correct but (R) is not correct

(3) (A) is not correct but (R) is correct

(4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

20. Which statement is incorrect :

(1) ADH facilitates water reabsorption from latter part of tubule ✓

(2) ANF mechanism act as a check on the renin angiotensin mechanism ✓ → B.P↓

(3) Atrial Natriuretic Factor activates the adrenal cortex to release aldosterone ✗

(4) Presence of glucose in urine are indicative of diabetes mellitus.

21. In glomerulus blood filters through how many layers

(1) One

(2) Three

(3) Two

(4) Four

BIOLOGYLIVE

22. **The group of organisms which are helpful in making curd from milk, production of antibiotics, fixing nitrogen in legume roots. This group of organisms are :**

(1) Heterotrophic bacteria

(2) Archaebacteria

(3) Cyanobacteria

(4) Chemosynthetic autotrophic bacteria

23. How many statements are correct with reference to sporozoans :-

(a) All are parasite

(b) Locomotory organelle absent

(c) Malaria causing agent belongs to sporozoans

(d) Nuclear membrane are present

(1) 1

(2) 4

(3) 3

(4) 2

24. Bladderwort and venus fly trap are examples of

(1) Partially heterotrophic plants

(2) Insectivorous plants

(3) Totally heterotrophic plants

(4) More than one options are correct

Parasitic = cuscutta

BIOLOGYLIVE

25. M.W. Beijerinek demonstrated that the extract of the infected plants of tobacco could cause infection in healthy plants and called the fluid as

(1) *Contagium vivum fluidum*

(2) Infectious living fluid

(3) Both 1 and 2

(4) Infectious non living fluid

26. Given below are two statements :

Statement I : The boundaries of the kingdom protista are not welldefined

Statement II : Most fungi are saprophytic and absorb organic matter from dead substance.

In the light of the above statements, choose the correct answer from the options given below

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both Statement I and Statement II are correct.

27. Given below are two statements one is labelled as Assertion (A) and the other is labelled as Reason (R)

Assertion (A) : Kingdom Protista forms a link with the other kingdoms.

Reason (R) : It is believed that Protista evolved from the kingdom Monera and is the ancestor of multicellular eukaryotes.

In the light of the above statements, choose the correct answer from the options given below :

(1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)

(2) (A) is correct but (R) is not correct

(3) (A) is not correct but (R) is correct

(4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

28. How many matching are correct :

a. Spherical	–	Coccus
b. Rod shaped	–	Bacillus
c. Comma shaped	–	Vibrium
d. Spiral	–	~~Vibrio~~ X

(1) 3 (2) 2

(3) 4 (4) 5

29. How many matching are correct :-

a.	Entamoeba	~~free living~~ Parasitic	~~Ciliated~~ amoeb. protozoans
b.	Trypanosoma	parasite	Flagellated protozoans
c.	Plasmodium	parasite	~~Ciliated~~ protozoans
d.	Plasmodium	parasite	Sporozoans

(1) 2 (b, d)
(2) 3
(3) 4
(4) 1

2025

30. Match the following

a. Lycopsida	i) *Dryopteris*
b. Pteropsida	ii) *Selaginella*
c. Sphenopsida	iii) *Psilotum*
d. Psilopsida	iv) *Equisetum*

(1) a(ii), b(iv), c(i), d(iii)

(2) a(i), b(iv), c(ii), d(iii)

(3) a(ii), b(i), c(iv), d(iii)

(4) a(ii), b(iii), c(iv), d(i)

BIOLOGYLIVE

31. Given are a few statements

(a) Important soil binders

(b) They are the first terrestrial land plant with vascular tissues

(c) Cones are present

Choose the option for which all three statements hold true

(1) *Ulothrix*

(2) *Pinus*

(3) *Cycas*

Gymn

(4) *Equisetum*

v.Imp

32. Given below are two statements :

Statement I : Fusion between one large, non motile, static female gamete and a smaller motile male gamete is called oogamous.

Statement II : Atleast half of total carbondioxide fixation on Earth is carried out by algae through photosynthesis.

Choose the correct answer from the options given below

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both, Statement I and Statement II are correct

33. Read the following statement and choose correct option

(i) Evolutionary pteridophyte are the first terrestrial plants to posses vascular tissue.

(ii) The main plant body of pteridophytes is ~~gametophytic~~ Sporophytic x

(iii) In gymnosperms the male and female gametophyte have an independent free living existance X

(iv) In coniferes niddle like leaves reduce the surface area.

(1) i, ii correct and iii, iv incorrect

(2) ii, iii correct and i, iv incorrect

(3) i, iv correct and ii, iii incorrect

(4) i, iii, iv correct and ii incorrect

34. Given below are two statements :

Statement I : In Rhodophyceae food is stored as complex carbohydrate in the form of ~~manitol~~. F.S X

F.S

Statement II : ~~Manitol~~ starch is very similar to amylopectin and glycogen in structure. X

Choose the correct answer from the options given below

✓(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both, Statement I and Statement II are correct

35. Recognise the given figure and find out correct statement for it.:

(i) It is a member of Rhodophycea ×

(ii) Oogamous type reproduction occur. ✓

(iii) Diplontic life cycle present ✓

(iv) It posses chlorophyll a and c as major pigement. ✓

(1) (i),(ii) are correct

(2) (ii), (iii), (iv) are correct ✓

(3) (i), (iii),(iv) are correct

(4) (i),(ii), (iii), (iv) are correct

Fucus

36. Given below are two statements :

Statement I : In mosses gametophyte consist of protonema stage and leafy stage.

Statement II : Sporophyte of moss is differentiated into foot, seta, capsule.

Choose the correct answer from the options given below

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both, Statement I and Statement II are correct

37. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R)

Assertion (A) : Genera *Selagenella* and *Salvinia* are known as heterosporous.

Reason (R) : They produce two kinds of spores, macro (large) and micro (small).

In the light of the above statements, choose the correct answer from the options given below :

(1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)

(2) (A) is correct but (R) is not correct

(3) (A) is not correct but (R) is correct

(4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

38. Given below are two statements :

Statement I : In Echinodermata water vascular system present which help in locomotion, capture and transport of food and respiration.

Statement II : In *Scoliodon* notochord is persistent through out life.

Choose the correct answer from the options given Below

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both, Statement I and Statement II are correct

v.v.Imp

39. The space between hump and mantle is called mantle cavity in which ....A....... are present:

(1) A – foot

(2) A – feather like gills

(3) A – Radula

(4) A – Eyes

40. **Given below are two statements :**

Statement I : Platyhelminthes are hermaphrodite and fertilisation is internal occur. Generally.

Statement II : Sponges are ~~exclusively~~ marine and mostly are asymetrical.

Choose the correct answer from the options given below

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both, Statement I and Statement II are correct

41) Match the column I with column II and choose correct option:

Column I	Column II
A. Viviparous Vertebrate	(i) *Scoliodon*
B. Oviparous Vertibrate	(ii) *Labeo*
C. Flying vertebrate	(iii) *Pteropus*
	(iv) *Macropus*
	(v) *Neophron*

(1) A - i,ii, B - ii,v, C-iii,v

(2) A - i,iii,iv B - ii,v, C-iii,v

(3) A - iii,iv, B - i,ii,v, C-iv

(4) A - iii,iv B -v, C-iii,iv,v

42. Given below are two statements :

uroch.

Statement I : In ~~Cephalochordates~~ notochord is present only in larval tail. X

cephaloch.

Statement II : In ~~urochordates~~ notochord extends from head to tail and persist throughout life. X

Choose the correct answer from the options given below

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both, Statement I and Statement II are correct

43. Match the following columns

Column–A	Column–B
(a) *Columba*	i. Vulture
(b) *Psittacula*	ii. Penguin
(c) *Aptenodytes*	iii. Parrot
(d) *Neophron*	iv. Pigeon

(1) a–i, b–ii, c–iii, d–iv

(2) a–iii, b–iv, c–i, d–ii

(3) a–iv, b–iii, c–ii, d–i

(4) a–ii, b–i, c–iv, d–iii

44. Identify diagram and select correct option for diagram :

(1) *Nereis* – Dioecious, Parapodia

(2) *Nereis* – Monoceious, Nephridia

(3) *Hirudinaria* – Monoecious, Nephindia

(4) *Hirudinaria* – diocious, Parapodia

45. Given below are two statements one is labelled as Assertion (A) and the other is labelled as Reason (R)

Assertion (A) : In cassia and gulmohur, the aestivation is called Imbricate

Reason (R) : In Imbricate aestivation, margins of sepals or petals overlap one another in perticular direction x No direction

In the light of the above statements, choose the correct answer from the options given below :

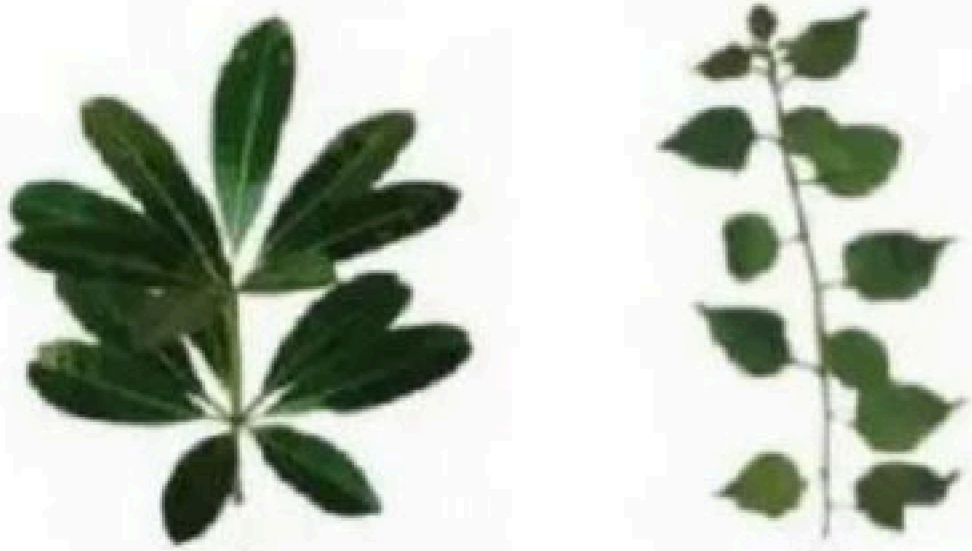
(1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)

(2) (A) is correct but (R) is not correct

(3) (A) is not correct but (R) is correct

(4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

46. Identify the diagram A and B and select correct option for A and B :



(1) A – whorl – Alstonia , B – Alternate – Mustard
(2) A – whorl – Alstonia, B – Opposite – China rose
(3) A – Alternate– Sunflower, B – Opposite – Calotropis
(4) A – Opposite– Chinarose, B – Alternate– Mustard

2021

47. Match the following column I and column II :

column–I	column–II
a. Marginal	i. Lemon
b. Axil	ii. Pea
c. Parietal	iii. Primrose
d. Free – central	iv. Argemone
e. Basal	v. Marigold

(1) a-i, b-ii, c-iii, d-iv, e-v

(2) a-v, b-iv, c-iii, d-ii, e-i

✓(3) a-ii, b-i, c-iv, d-iii, e-v

(4) a-ii, b-i, c-v, d-iii, e-iv

48. Select the correct statement about mustard :

i. Alternate phyllotaxy

ii. Superior ovary

iii. Tetradynamous stamen

iv. Variation in length of filament

v. Apocarpous ovary x

(1) Only iii

(2) Only ii, iii and v

(3) Only i. ii, iii and iv

(4) All are correct

BIOLOGYLIVE

49. Select the incorrect statement from the followings:

(1) Open conjoint, collateral or bicollateral vascular bundles found in ~~monocot~~ dicot stem

(2) All the tissues on the innerside of the endodermis such as pericycle, vascular bundles and pith in dicot root consitute the stele

(3) Polyarch vascular bundles found in monocot root

(4) Phloem parenchyma is absent in monocot stem

50. Large number of vascular bundle found in monocot stem each surrounded by :

(1) Collenchymatous multilayered sheath

(2) Parenchymatous single layered sheath

(3) Sclarenchymatous bundle sheath

(4) None of these

51. Given below are two statements :

Statement I :

multicellular

Trichomes in the shoot system are usually ~~unicellular~~

Statement-II :

Trichomes may be branched or unbranched

Choose the correct answer from the option given below:

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both Statement I and Statement II are correct

52. Schlerenchymatous hypodermis is characteristics of :

Collenchyma

(1) Dicot stem

(2) Monocot stem

(3) Monocot as well as dicot stem

(4) Hydrophytes

53. In monocot leaf which type of guard cell present :

(1) Bean shape → Dicot

(2) Dumb-bell shaped

(3) Kidney shape

(4) All of these

54. Casparian bands (strips) are characteristic feature of :

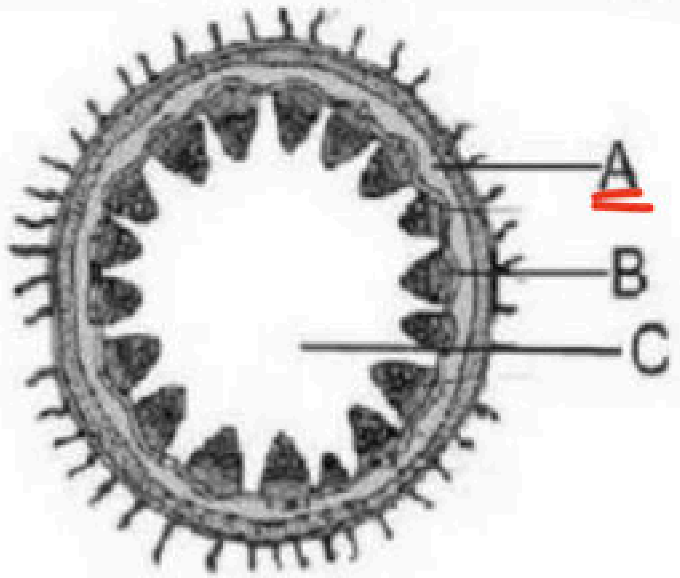
(1) Epidermis

(2) Epiblema

(3) Exodermis

(4) Endodermis

55. **In the given figure A and B are :**



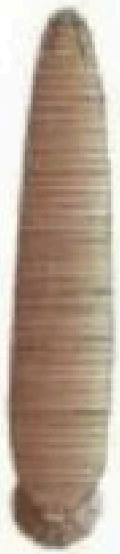
(1) A – Parenchyma, B – Epidermis, C – Ground tissue

(2) A – Endodermis, B – Parenchyma, C – Pith

(3) A – Parenchyma, B – Phloem, C – Ground tissue

(4) A – Parenchyma, B – Pericycle, C – Pith

56. **Identify diagram and select correct option for diagram :**



(1) *Nereis* – Dioecious, Parapodia

(2) *Nereis* – Monoceious, Nephridia

(3) *Hirudinaria* – Monoecious, Nephridia

(4) *Hirudinaria* – diocious, Parapodia

57. **Semilunar patches of sclerenchyma are found in**

(1) Dicot stem

(2) Dicot root

(3) Monocot root

(4) All of these

58. **Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R)** uricotelic

Assertion (A) : Cockroach is ureotelic

Reason (R) : Malpighian tubules absorb nitrogenous waste product and convert them into uric acid which is excreated out through the hindgut.

In the light of the above statements, choose the correct answer from the options given below :

(1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)

(2) (A) is correct but (R) is not correct

(3) (A) is not correct but (R) is correct

(4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

59. Match Column- I with Column- II and select the correct option :

Column - I Epithelial tissue	Column-II Location
a. Cuboidal	i. Wall of blood vessels
b. Ciliated	ii. Lining of stomach and intestine
c. Columnar	iii. Inner lining of fallopian tube
d. Squamous	iv. Duct of glands

(1) a -i, b-ii, c-iii, d- iv

(2) a -ii, b-iii, c-i, d- iv

✓(3) a -iv, b-iii, c-ii, d- i

(4) a -iii, b-iv, c-i, d- ii

60. In frog the gaseous exchange during hibernation and aestivation takes place through :

(1) Buccal cavity

(2) Lungs and Buccal cavity

(3) Skin

(4) Lungs

61. In Frog RBC's are :

(1) Anucleated with Haemoglobin

(2) Nucleated without Haemoglobin

(3) Anucleated without Haemoglobin

(4) Nucleated with Haemoglobin

62. Bidder's canal is present in :

(1) Testes of frog

(2) Kidney of male frog

(3) Kideny of female frog

(4) 2 and 3 both

63. **Presence of Nictitating membrane is the charectristic of :**

(1) Coackroach

(2) Frog

(3) Earthworm

(4) 1 and 2 both

64. Special venous connection between liver and intestine in frog is :

(1) Hepatic portal system

(2) Renal protal system

(3) 1 and 2 both

(4) None

65. Read the following statement and choose correct option :-

(i) In chlorophyceae stored food is starch

(ii) Anisogamous type reproduction present in *Eudorina*

colony

(iii) *Volvox* is ~~filamentous~~ algae

(iv) In Bryophyte antheridium produce biflagellated antherozoids.

(1) Only i, ii correct

(2) Only iii, iv correct

(3) Only i, ii, iv correct

(4) i, ii, iii, iv correct

Romar Saini 21- MBBS AIIMS

66. **Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R)**

Assertion (A) : Bryophyte and pteridophyte have haplodiplontic life cycle.

Reason (R) : *Volvox, Spirogyra, Fucus* and *Chlamydomonas* have Haplontic life cycle.

diplontic

In the light of the above statements, choose the correct answer from the options given below :

(1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)

(2) (A) is correct but (R) is not correct

(3) (A) is not correct but (R) is correct

(4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

67. In Algae algin and carrageen are obtained from which type of algae respectively

(1) Marine brown and red algae

(2) Marine red algae and brown algae

(3) Fresh water brown algae and marine red algae

(4) Fresh water red algae and brown algae

68. Which of the following is incorrect :

Dr. phd.

(1) In *Pinus* male and female cone/strobili borne on same tree

(2) In *Cycas* male cone and megasporophyll born on different tree

(3) *Cycas* plants are ~~mon~~oecious dioecious

(4) Both 1 and 2

69 Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R)

Assertion: Hemichordates have a rudimentary structure in collar region called stomochord structure similar to notochord.

Reason: Hemichordata was earlier considered as a subphyum under phyllum chodata.

In the light of the above statements, choose the correct answer from the options given below :

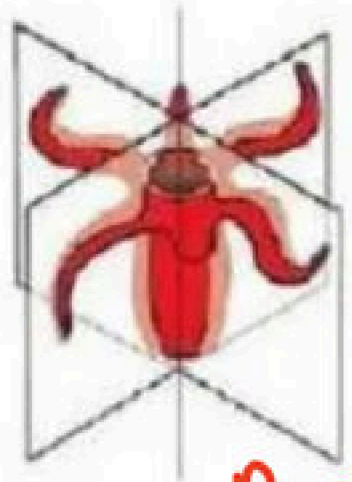
(1) Both (A) and (R) are true but (R) is not the correct explanation of (A)

(2) (A) is true but (R) is false

(3) (A) is false but (R) is true

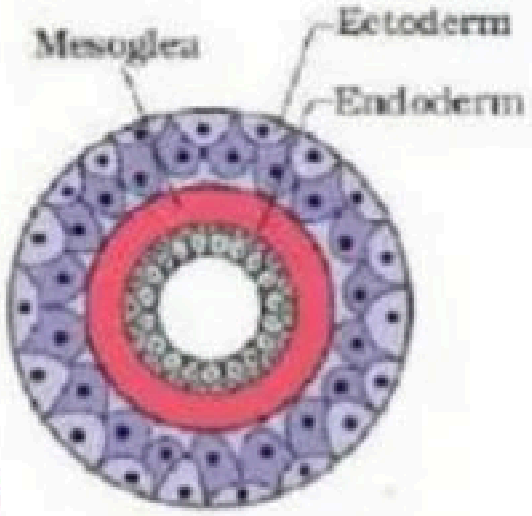
(4) Both (A) and (R) are true and (R) is the correct explanation of (A)

70. **For given diagrames which of the following option correct :**



Radial

A



B

(1) A – Radial- *Hydra*, B – Triploblastic - *Hydra*

(2) A – Radial -*Hydra*, B – Diploblastic - *Meandrina*

(3) A – Bilateral- *Adamsia*, B – Triploblastic-*Planaria*

(4) A – Radial - *Hydra*, B – Diploblastic - *Ancyclostoma*

71. Given below are two statements : canal. Echino.

Statement I : Sponges have a water ~~vascular~~ system which help in transport of food and respiration.

Statement II : In sponges fertilisation is internal and development is indirect.

Choose the correct answer from the options given below

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both, Statement I and Statement II are correct

72. Which one of the following matching are correct :

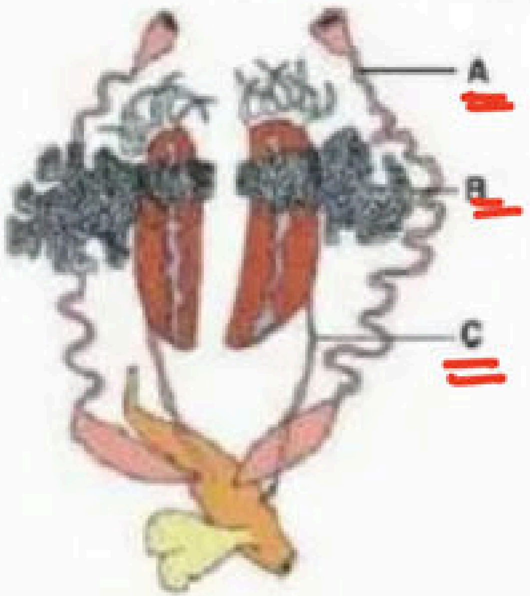
(1) Polyp – Jelly fish X

(2) Gorgonia – Sea pen X

(3) Pennatula – Sea fan X

(4) Meandrina – Brain coral

73. In given figure Identify A, B and C :



Female frog

(1) A – Ovary, B – Oviduct, C – Ureter

(2) A – Oviduct, B – Ovary, C – Ureter

(3) A – Ureter, B – Ovary, C – Oviduct

(4) A – Vasa efferentia, B – Testis, C – Ureter

2025

74. Given below are two statements :

Statement I : Hepatic protal system and Renal portal system both are preent in Frog.

Statement II : Special venous connection between Kideny and lower part of the body is called Renal portal system.

In the light of the above statements, choose the correct answer from the options given below

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both Statement I and Statement II are correct.

75. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R)

Assertion (A) : Alimentary canal of frog is short ✓

Reason (R) : Frogs are Hervivores X

In the light of the above statements, choose the correct answer from the options given below :

(1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)

✓ (2) (A) is correct but (R) is not correct

(3) (A) is not correct but (R) is correct

(4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

76. Read the following statement and give correct answer regarding bacterial cell

(a) Glycocalyx is the outermost envelope in bacteria ✓

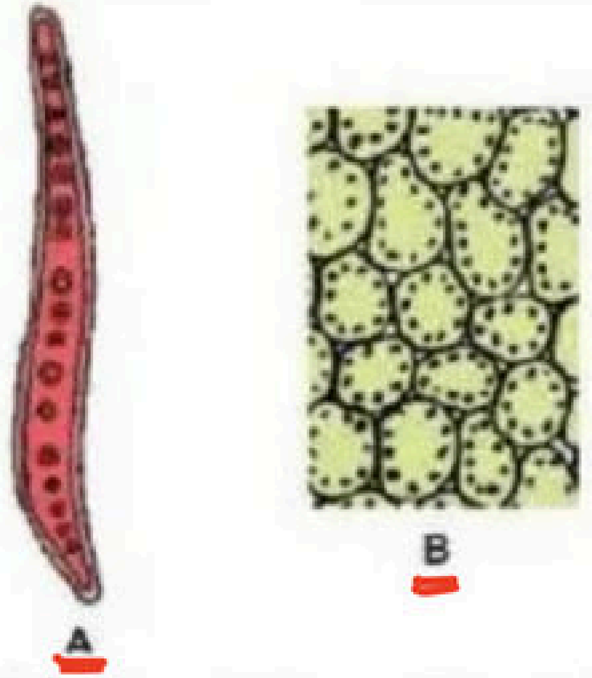
(b) The glycocalyx could be a loose sheath called capsule x

(c) The glycocalyx may be the thick and tough called slime layer x

(1) a correct ✓ (2) a, b correct

(3) a, c correct (4) b correct

77. **On the basis of given figures which of the following option is correct :**



(1) A – Vessel – Present in Xylem

(2) B – Mesophyll cells – Round and oval

(3) A – Tracheid – Present in Xylem

(4) More then one option correct

78. **Given below are two statements :**

Statement I : Ribosomes are composed of RNA and proteins and are not surrounded by any membrane.

Statement-II : Eukaryotic ribosomes are 80 S and prokaryotic ribosomes are 70 S and are present in cytoplasm.

Choose the correct answer from the option given below:

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both Statement I and Statement II are correct

79. Given below are two statements :

Statement I : Endoplasmic reticulum bearing ribosomes on their surface is called R.E.R.

Statement-II : R.E.R. is frequently observed in the cells actively involve in protein synthesis and secretion.

Choose the correct answer from the option given below:

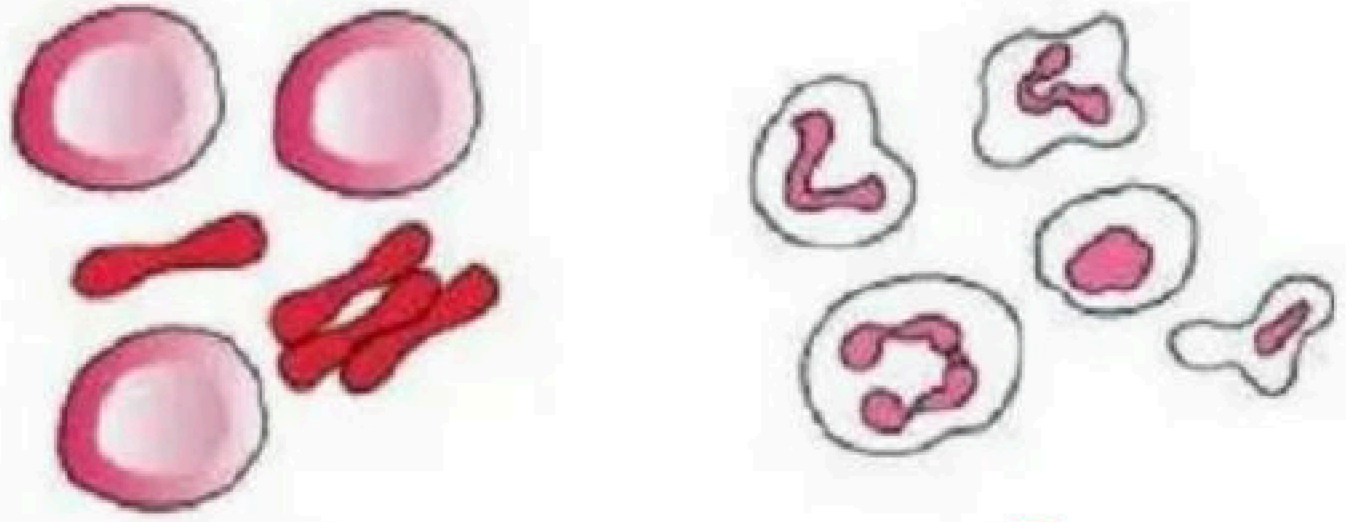
(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both Statement I and Statement II are correct

80. According to given figure which of the following option is correct :



A B

(1) B – Red blood cells – Round and biconvex

(2) A – White blood cells – Amoeboid – B

(3) A – Red blood cells – about 7 μm in diameter

(4) All of these

81. **Given below are two statements :** ↳ Chloroplast

X **Statement I :** Mitochondria is the largest cytoplasmic organelle of plants .

non-

X **Statement II :** Ribosome is smallest membranous cell organelle in plant

Choose the correct answer from the options given below.

✓ (1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II isincorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both, Statement I and Statement II are correct

82. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R)

Assertion (A) : Cells also vary greatly in their shapes.

Reason (R) : The shape of cell may vary with the function they perform.

In the light of the above statements, choose the correct answer from the options given below :

(1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)

(2) (A) is correct but (R) is not correct

(3) (A) is not correct but (R) is correct

(4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

83. How many radial spokes are present in a cilium :

(1) 18

(2) 9

(3) 27

(4) 36

84. How many matching are correct :

Organelles		Membrane, name/ charector
A – Vacuoles	–	Double, Tonoplast
B – Chloroplast	–	Double, Inner ~~more~~ less permiable
C – Mitochondria	–	Double, Inner form cristae
D – Centriole	–	~~Single~~, help in cell division Nomemb

(1) 4

(2) 3

(3) 2

(4) 1

85. Given below are two statements : one is labelled as :

Assertion (A) and the other is labelled as Reason (R).

Assertion (A) : Endomembrane system include E.R, Golgi complex, lysosomes and vacuoles.

Reason (R) : Their functions are coordinated.

In the light of the above statements, choose the correct answer from the options given below

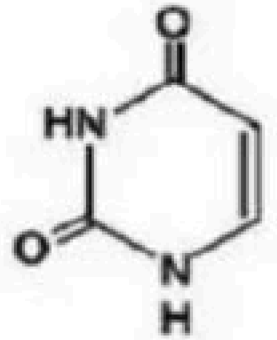
(1) Both (A) and (R) are true but (R) is not the correct explanation of (A)

(2) (A) is true but (R) is false

(3) (A) is false but (R) is true

(4) Both (A) and (R) are true and (R) is the correction explanation of (A)

86. Which of the following is correct according to given diagrammatic representation :



uracil

(1) It is a nucleoside present in RNA

(2) It is a nitrogenous base present in DNA

(3) It is a nitrogenous base present in RNA

(4) It is a nitrogenous base present in DNA and RNA

87. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R)

Assertion: Cynobacteria have chlorophyll 'a' similar to green plant and are photosynthetic autotrophs.

Reason: ~~All~~ cynobacteria can fix atomospheric nitrogen in specialised cell called heterocyst.

In the light of the above statements, choose the correct answer from the options given below :

(1) Both (A) and (R) are true but (R) is not the correct explanation of (A)

(2) (A) is true but (R) is false

(3) (A) is false but (R) is true

(4) Both (A) and (R) are true and (R) is the correct explanation of (A)

88. Bacteria which play a great role in recycling nutrient like nitrogen, phosphorous, iron and sulphur are:

(1) Anoxygenic photosyntheter

(2) Blue green algae

(3) Chemosynthetic autotrophic

(4) Photosynthetic autotrophic

89. Which of the following is incorrect about chrysophytes:

(1) Chrysophytes includes diatoms and and golden Algae

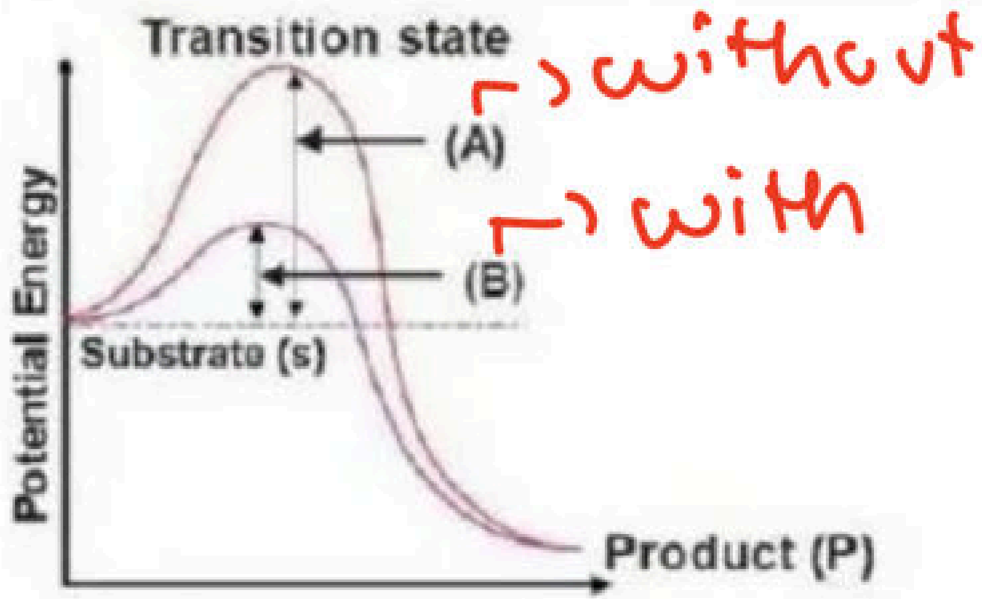
(2) Chrysophytes are found in freshwater as well as in marine water

(3) They are microscopic and float ~~active~~ly against water current

Passively

(4) None of these

90. In the given graphs which graphs represents, activation energy without enzyme and with enzyme. Choose the correct option :



(1) A = Activation energy with enzyme

(2) B = Activation energy with enzyme

(3) B = Activation energy without enzyme

(4) 1 and 3 both

91. **Given below are two statements :**

Statement I : Biomolecules which have molecular weight less than one thousand daltion are usually reffered to as micromolecules.

Statement-II : Proteins, nucleic acid, polysacharide and lipids have molecular weight in range of ten thousand daltons and above.

Choose the correct answer from the option given below:

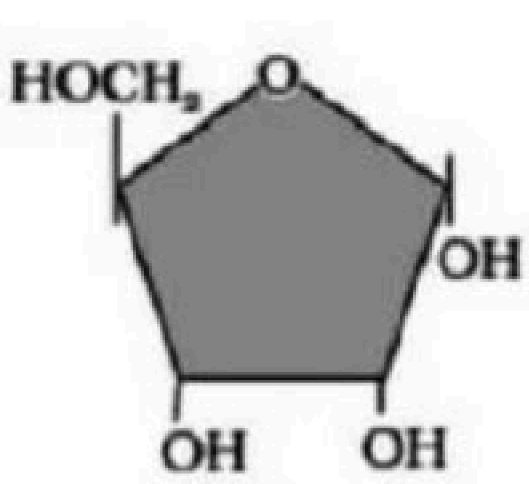
(1) Both Statement I and Statement II are incorrect

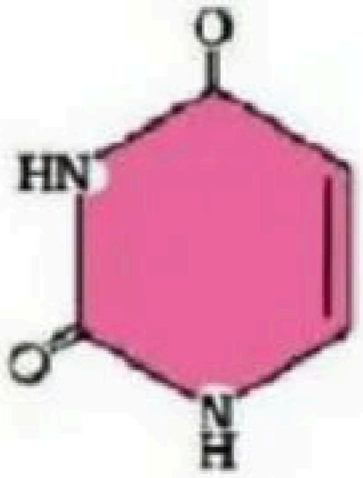
(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both Statement I and Statement II are correct

92. The given diagram A and B respectively





A = Ribose B = uracil

(1) Ribose and uracil

(2) Fructose and thymine

(3) Glucose and pyrimidine

(4) Ribose and purine

93. Which of the following are aromatic amino acids

(a) Tryptophan

(b) Tyrosine

(c) Phenylalanine

(d) Histidine X

(1) b and c only
(2) a,b,c only
(3) a and b only
(4) all of these

94. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R).

Assertion (A) : Nonprotein constituent called cofactor are bound to enzyme to make the enzyme catalytically active.

Reason (R) : Only co-enzyme serve as cofactor in enzyme catalyzed reaction.

In the light of the above statements, choose the correct answer from the options given below

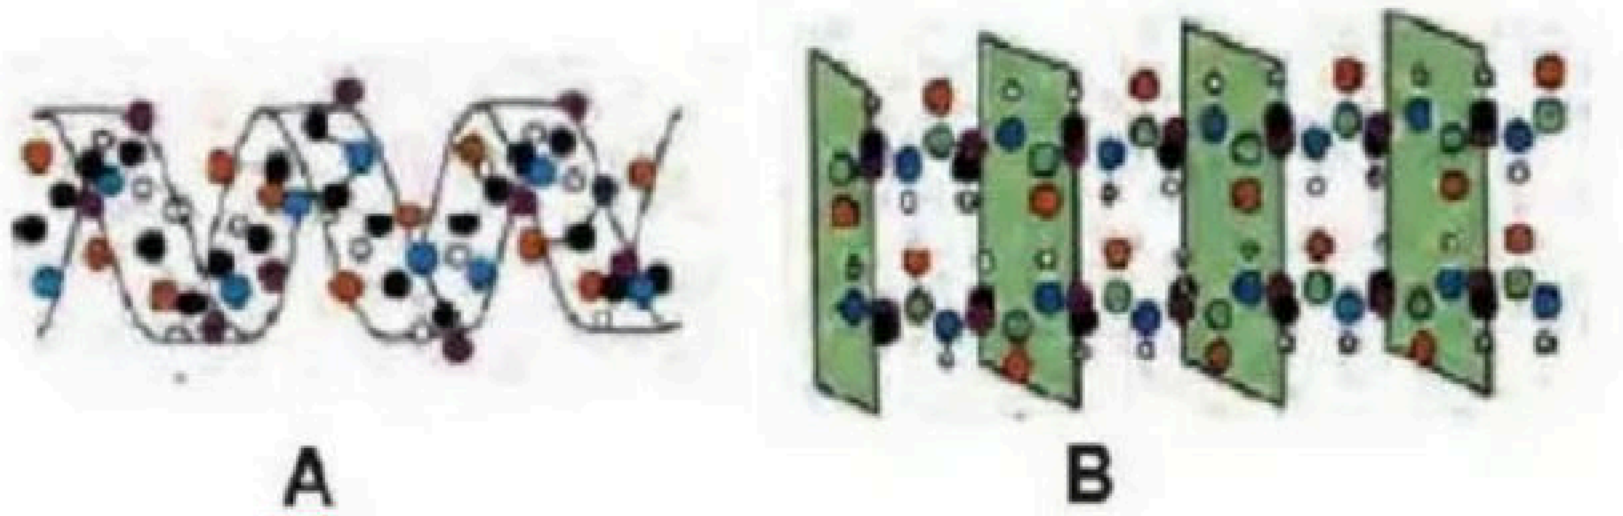
(1) Both (A) and (R) are true but (R) is not the correct explanation of (A)

(2) (A) is true but (R) is false

(3) (A) is false but (R) is true

(4) Both (A) and (R) are true and (R) is the correction explanation of (A)

95 Recognise diagram and choose correct option :



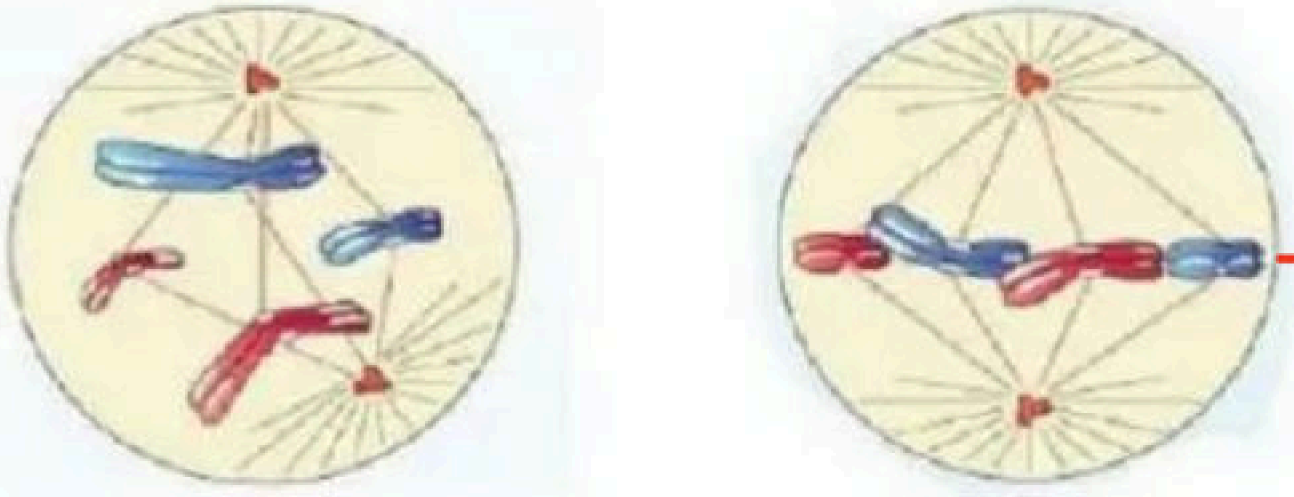
(1) A – Secondary – Alpha helix B – Primary – Beta plated sheet

(2) A – Secondary – Beta plated sheet B – Tertiary – Alpha helix

(3) A – Primary – Alpha helix B – Secondary – Beta plated sheet

(4) A – Secondary – Alpha helix B – Secondary – Beta plated sheet

96. Identify the following diagramatic figure and choose correct option :



A B

→ Metaphase

(1) A – Metaphase II , B – Anaphase II

(2) A – Metaphase I , B – Anaphase I

(3) A – Transition to Anaphase I , B – Prophase

(4) A – Transition to Metaphase , B – Metaphase

97. How many meiotic division would be required to produced 100 male gametophyte in angiosperms

(1) 26

(2) 25

(3) 100

(4) 125

$\frac{n}{4} = \frac{100}{4} = \underline{\underline{25}}$

98. Given below are two statements :

Statement I : Cell plate represents the middle lamella between the walls of two adjacents cells cytokinesis

Statement-II : At the time of karyokinesis, organelles like mitochondria and plastids get distributed between the daughter cells

Choose the correct answer from the option given below:

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both Statement I and Statement II are correct

99. In mitosis how many time nucleus divide :

(1) Twice

(2) Once

(3) Four time

(4) Does not divide

BIOLOGYLIVE

100. A process that makes important difference between C_3 and C_4 plants is:

(1) Transpiration

(2) Glycolysis

(3) Photosynthesis

(4) Photorespiration

101. Splitting of water in photosynthesis is called :

(1) Dark reaction

(2) Photolysis

(3) Electron transfer

(4) Phototropism

BIOLOGYLIVE

102 In pigment system II electrons from excited P680 accepted by :

(1) Phaeophytin

(2) Plastocyanin

(3) Plastoquinone

(4) AFeS

3 2 1

103. ATP : $NADPH_2$: CO_2 consumption ratio during the photosynthesis in the C_3 plant :

(1) 3 : 2 :1

(2) 1 : 2 :3

(3) 2 : 3 :1

(4) 1 : 2 :4

321 → C_3 Plant

521 → C_4

104. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R)

Assertion (A) : In C_4 plants photorespiration does not occur.

Reason (R) : C_4 plants have a machanism that increase the concentration of CO_2 at the enzyme site.

choose the correct answer from the options given below :

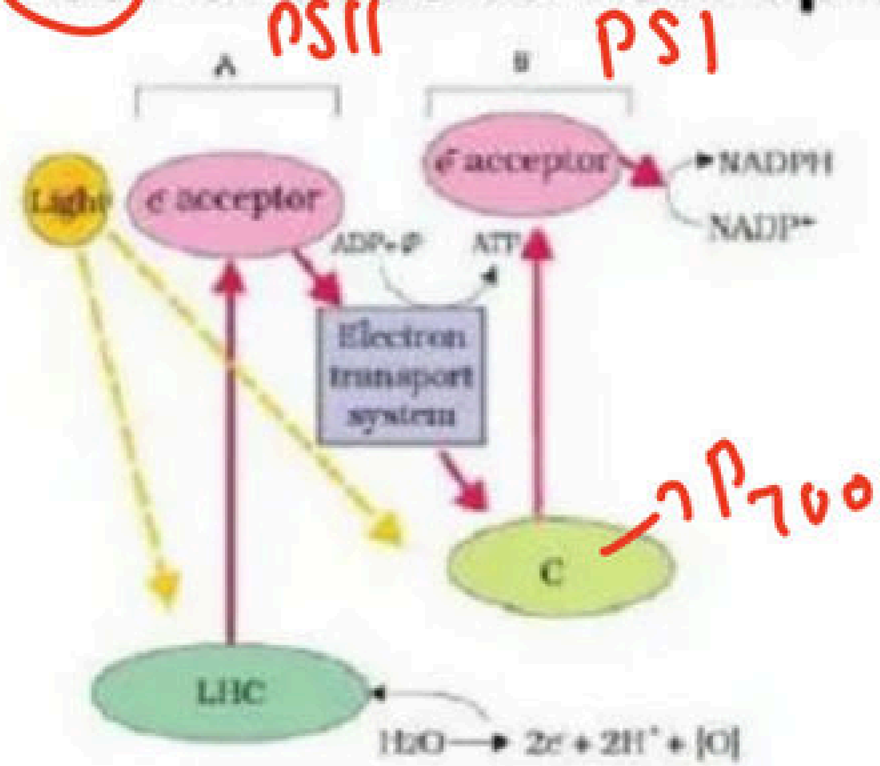
(1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)

(2) (A) is correct but (R) is not correct

(3) (A) is not correct but (R) is correct

(4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

105. Choose correct option according to given figure :



(1) A- PS I. B- PS II, C- P 680

(2) A- PS II. B- PS I, C- P 700

(3) A- PS II. B- PS I, C- P 680

(4) A- PS I. B- PS II, C- P 700

106. Which of the following the electron carrier is present on inner side of thylakoid membrane :

(1) Plastoquinone

(2) Plastocyanin

(3) ATP synthase

(4) All of these

107. Match the following :

a) P700 — i) PS II

b) P680 — ii) PS I

c) P680 & P700 — iii) Cyclic photophosphorylation

iv) Non-cyclic photophosphorylation

(1) a-ii, b-i, c-iii & iv

(2) a-ii, b-i & iii, c-iv

(3) a-ii & iii, b-i, c-iv

(4) a-ii, b-iii, c-i & iv

108. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R)

Assertion (A) : Non cyclic photophosphory-lation does not occur in stroma lamellae .

Reason (R) : In stroma lamallae membrane PS II and NADP reductase enzymes are not present.

choose the correct answer from the options given below :

(1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)

(2) (A) is correct but (R) is not correct

(3) (A) is not correct but (R) is correct

(4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

109. Photorespiration is favoured by :

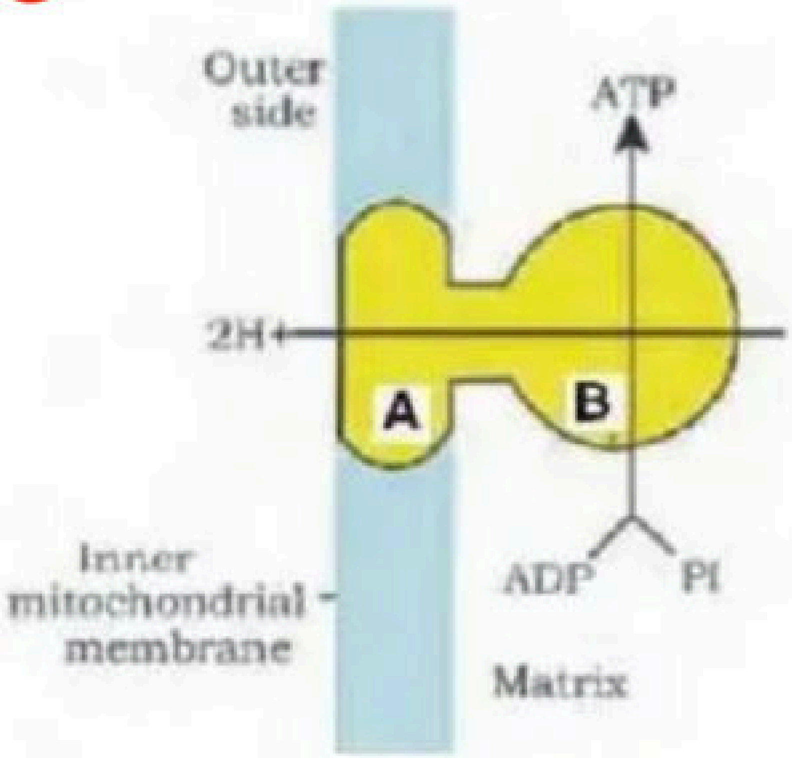
(1) Low light intensity

(2) Low O_2 and high CO_2

(3) Low temperature

(4) High O_2 and Low CO_2

110. In given figure A and B are component of which complex :



(1) Complex I

(2) Complex III

(3) Complex V

(4) Complex II

111. Presence of epicalyx and monadelphous condition of stamens is characteristic feature of the family :

(1) Liliaceae

(2) Malvaceae

(3) Leguminosae

(4) Solanaceae

112. Substrate level phosphorylation in Kreb's cycle takes place in between

(1) Citrate to isocitrate.

(2) α -ketoglutaric acid to succinyl-CoA

(3) Conversion of succinyl-CoA to succinic acid

(4) Succinic acid to fumaric acid

113. **Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R)**

Assertion (A) : Respiratory pathway is considered as an amphibolic pathway

Reason (R) : It involves both anabolism and catabolism.

choose the correct answer from the options given below :

(1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)

(2) (A) is correct but (R) is not correct

(3) (A) is not correct but (R) is correct

(4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

114. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R)

Assertion (A) : Cellulose can not hold I2.

Reason (R) : Cellulose does not contain complex helices.

In the light of the above statements, choose the correct answer from the options given below :

(1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)

(2) (A) is correct but (R) is not correct

(3) (A) is not correct but (R) is correct

(4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

115. Nicotinamide adenine dinucleotide (NAD) and NADP contain the vitamin niacin are example of

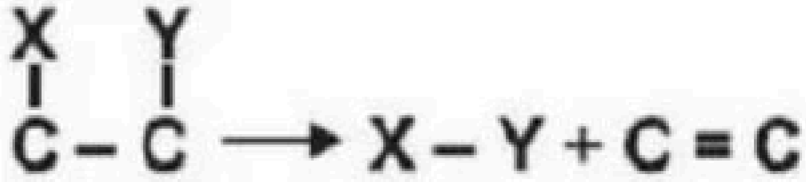
(1) Prosthetic groups

(2) Co-enzymes

(3) Metal ions.

(4) All of these

116. The reaction is catalysed by



(1) Transferases

(2) Hydrolases

(3) Lyases

(4) Isomerases

BIOLOGYLIVE

117. Given below are two statements :

Statement I :

Events of cell cycle are themselves under genetic control

Statement II :

Growth and reproduction are characteristic of cells, Indeed of all living organism

Choose the correct answer from the options given below.

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both, Statement I and Statement II are correct

118. Synapsis occurs between :

(1) Two non-homologous chromosome

(2) mRNA and ribosomes

(3) Spindle fibres and centromere

(4) Two homologous chromosome

119. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R).

Assertion (A) : Meiosis increase the genetic variability in population of organism from one generation to the next

Reason (R) : In meiosis crossing over occur. Crossing over lead to recombination of genetic material on the two chromosome.

In the light of the above statements, choose the correct answer from the options given below

(1) Both (A) and (R) are true but (R) is not the correct explanation of (A)

(2) (A) is true but (R) is false

(3) (A) is false but (R) is true

(4) Both (A) and (R) are true and (R) is the correction explanation of (A)

120. Read the following statement and choose correct answer :

(a) Synapsis of homologous chromosomes takes place during prophase I of meiosis

(b) Division of centromere takes place during Anaphase I of meiosis

(c) Spindle fibres disappear completely in telophase of mitosis

(d) Nucleoli reappear at telophase I of meiosis

(1) Only a, b correct

(2) Only a, b, c correct

(3) Only a, c, d correct

(4) Only a, b, c, d correct

BIOLOGYLIVE

121. How many meiotic division required to form 60 seeds of higher plants :

(1) 30

(2) 75

(3) 15

(4) 60

PMC

$\frac{60}{4} + 60$

$(15 + 60)$

$\left(n + \frac{n}{4}\right)$

BIOLOGYLIVE

122. Match the following with respect to meiosis :

(a) Zygotene	(i) Terminalization
(b) Pachytene	(ii) Chiasmata
(c) Diplotene	(iii) Crossing over
(d) Diakinesis	(iv) Synapsis

Select the correct option from the following

(a) (b) (c) (d)

(1) (iv) (iii) (ii) (i)

(2) (i) (ii) (iv) (iii)

(3) (ii) (iv) (iii) (i)

(4) (iii) (iv) (i) (ii)

123. Sucrose is converted into glucose and fructose by the enzyme:

(1) Invertase

(2) Zymage

(3) Hexokinase

(4) Ligase

124. Choose the correct combination between respirotory substrate and their respective RQs:

	Fat	Carbohydrate	Protein
(1)	1	0.7	0.9
(2)	0.7	1	0.9
(3)	0	1	0.7
(4)	0.7	2	0.9

Link Reaction.

125. How many ATP will be produced during the production of molecule of acetyl CoA from two molecule of pyruvic acid :

(1) 3 ATP

(2) 6 ATP

(3) 8 ATP

(4) 38 ATP.

2NADH = 6 ATP

126. **When fats are broken down what will formed :**

(1) Fatty acid and glycerol

(2) Fatty acid and ethanol

(3) Fatty acid and carbinol

(4) Glycerol and pyruvic acid.

127. **The correct sequence of electron acceptor in ATP synthesis is :**

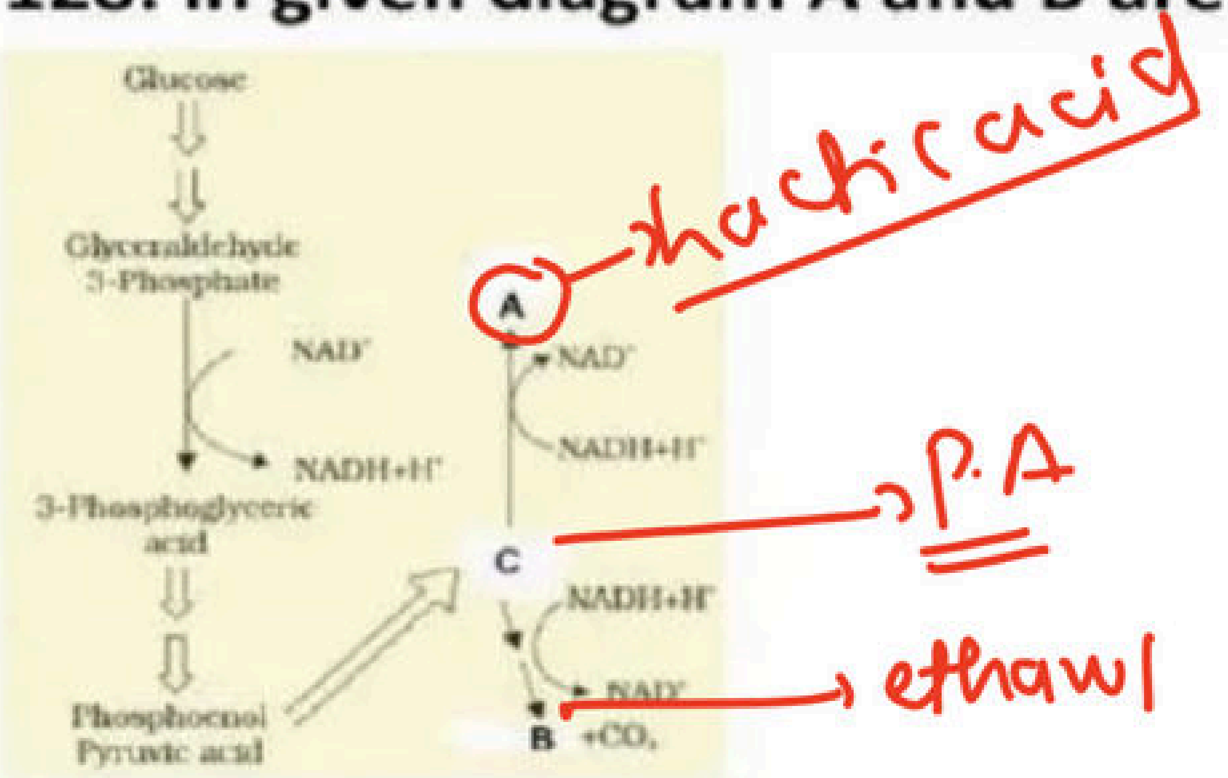
(1) Cyt, b, c, a_3, a

(2) Cyt, c, b, a, a_3

(3) Cyt. a, a, b, c

(4) Cyt. b, c_1,c, a, a_3

128. In given diagram A and B are :



(1) Lactic acid and ethanol respectively

(2) Ethanol and lactic acid respectively

(3) Pyruvic acid and Ethanol respectively

(4) Lactic acid pyrubic acid respectively

129. **Given below are two statements :**

Statement I : Epthephon promotes female flower in cucumbers thereby increasing yeild

Statement-II : Ethephon hastens fruit repening in tomato and apples and accelerates abscission in flowers and fruits.

Choose the correct answer from the option given below:

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both Statement I and Statement II are correct

130. Which of the following hormones plays an important role in seed development, maturation and dormancy

(1) ABA

(2) GA3

(3) Auxins

(4) Cytokinins

131. Match the column I with column II :

Column I	Column II
a. Extrinsic factors	i. Temperature
b. Intrinsic factors	ii. Genetic factor
	iii. Light
	iv. Plant growth regulator

(1) a – i, iv b – ii, iii

(2) a – i, iii , iv b – ii

(3) a – i, iii b – ii, iv

(4) a – ii b – i, iii, iv

132. Match the following :

Column-I	Column-II
(a) Auxin	(i) Promote senescence of leaves and flowers
(b) Ethylene	(ii) Bolting
(c) Gibberellin	(iii) Inhibition of seed germination
(d) Abscisic acid	(iv) parthenocarpy

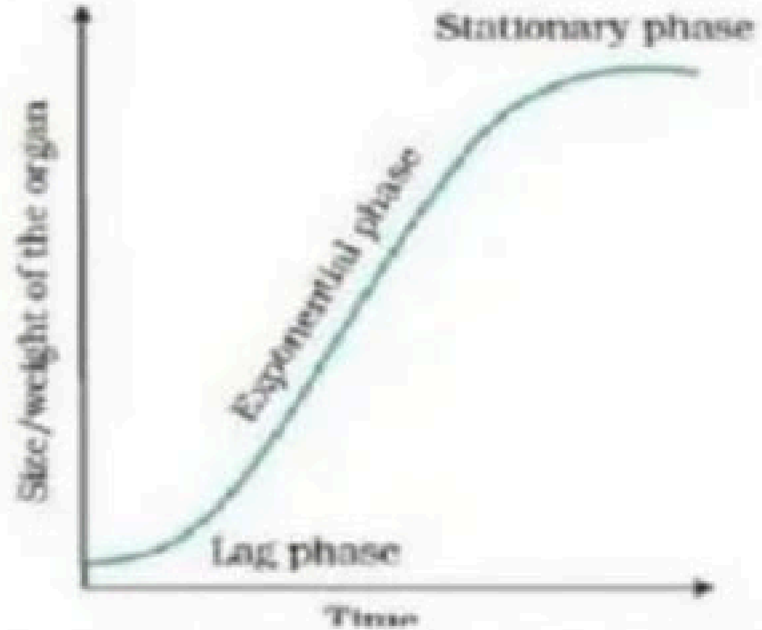
(1) a-iv, b-i, c-ii, d-iii

(2) a-i, b-iv, c-iii, d-ii

(3) a-iv, b-ii, c-iii, d-i

(4) a-iii, b-ii, c-i, d-iv

133. According to given figure which of the following is correct option :



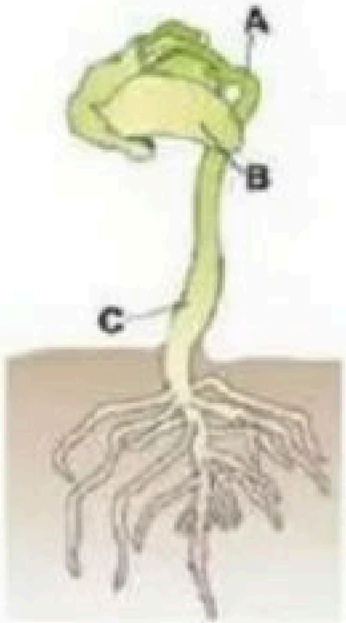
(1) Represent sigmoid growth

(2) Represent linear growth

(3) Can be express as W1 = W0 ert

(4) 1 and 3 Both

134. Identify the A,B and C :



(1) A – Epicotyl hook, B – Cotyledons , C – Hypocotyl

(2) A – Cotyledons, B – Epicotyl hook , C – Hypocotyl

(3) A – Hypocotyl , B – Cotyledons , C – Epicotyl

(4) A – Seed coat, B – Cotyledons , C – Hypocotyl

135. Match the given column I and column II select correct option :

(A) Bicuspid valve	(i) Between right atrium and right ventricle
(B) Semilunar valve	(ii) Between left atrium and left ventricle
(C) Tricupisd valve	(iii) Between right ventricle and pulmonary artery

(1) A-ii, B-iii, C-i

(2) A-iii, B-ii, C-i

(3) A-i, B-iii, C-ii

(4) A-iii, B-i, C-ii

136. The maximum volume of air a person can breath in after forced expiration is : VC

(1) ERV + TV + IRV

(2) ERV + TV

(3) ERV + IRV

(4) IRV + TV

137. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R).

Assertion (A) : Pneumotaxic center present in the pons region of the brain.

Reason (R) : Pneumotaxic center can moderate the function of respiratory rhythm center.

In the light of the above statements, choose the correct answer from the options given below

(1) Both (A) and (R) are true but (R) is not the correct explanation of (A)

(2) (A) is true but (R) is false

(3) (A) is false but (R) is true

(4) Both (A) and (R) are true and (R) is the correction explanation of (A)

138. **Given below are two statements :**

Statement I : The maximum volume of air a person can breaths in after forced expiration is called vital capacity.

Statement-II : The maximum volume of air a person can breath out after forced inspiration is called ~~expiration capacity~~. V.C

Choose the correct answer from the option given below:

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both Statement I and Statement II are correct

139. Which statement is correct for residual volume :

(1) Volume of air inspired or expired during a normal respiration

(2) Additional volume of air, a person can inspire by a forcible inspiration

(3) Additional volume of air, a person can expire by a forcible expiration

(4) Volume of air remaining in the lungs even after a forcible expiration

140. Given below are two statements :

Statement I : Every 100 ml of deoxygenated blood delivers approximately ~~5~~ 4ml ml of CO_2 to the alveoli.

Statement-II : CO_2 is carried by heamoglobin as carbaminoheamoglobin.

Choose the correct answer from the option given below:

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both Statement I and Statement II are correct

141. Which of the following factor favour the disociation of O_2 from oxyhaemoglobin :

(1) Low pO_2, high pCO_2, high H+ conc.

(2) Low pO_2, high pCO_2, low pH

(3) Low pO_2, low H^+ conc., high pH

(4) Both 1 and 2

142. Additional volume of air, a person can inspire by a forcible inspiration is called :

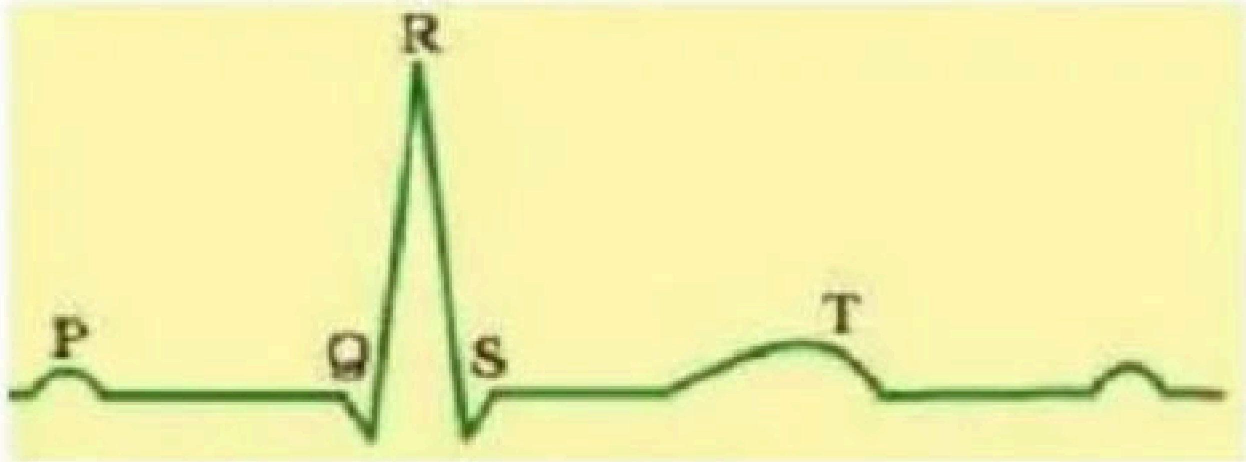
(1) Residual Volume

(2) Expiratory Reserve Volume

(3) Inspiratory Reserve Volume

(4) Tidal Volume

143. In given diagramatic representation T represent:



(1) Depolarisation of Atria

(2) Begining of the systole

(3) Repolerisation of ventricles

(4) End of diastole

144. Read the following events of blood clotting and choose correct sequence in options :

(i) Conversion of fibrinogen to fibrin → 3

(ii) Formation of clot → 4

(iii) Conversion of prothrombin to thrombin → 2

(iv) Thromboplastin formation → 1

(1) iv → iii → i → ii

(2) iii → iv → i → ii

(3) i → iv → iii → ii

(4) i → iii → iv → ii

145. Match the column I and column II

Column I	Column II
a. Basophils	i. Inflammation
b. Neutrophils	ii. Blood clotting
c. Plasma cells	iii. Phagocytosis
d. Platelets	iv. Antibodies

(1) a - i, b - iii, c - iv, d - ii

(2) a - i, b - iii, c - ii, d - iv

(3) a - iii, b - ii, c - iv, d - i

(4) a - iii, b - i, c - iv, d - ii

146. Which of the following incorrect option for mustard

(1) Syncarpous condition present

(2) Hypogynous condition present

(3) ~~Zygomorph~~ic condition present

(4) Actinomorphic condition present

147. Which is a wrong statement :-

(a) E.C.G. has clinical importance

(b) Adrenal medullary hormone has no effect on cardiac output

(c) Spleen is the graveyard of RBC in body

(d) Atherosclerosis is thining of arterial wall

(1) Only a and b

(2) Only b and c

(3) Only b and d

(4) Only d

148. Match the following columns

Column–I	Column–II
a. Tap root	i. Monstera
b. Fibrous root	ii. Guava
c. Adventitious root	iii. Banyan
d. Prop root	iv. Wheat

(1) a-ii, b-iv, c-i, d-iii
(2) a-i, b-ii, c-iii, d-iv
(3) a-ii, b-iii, c-i, d-iv
(4) a-iii, b-i, c-ii, d-iv

149. **Stem modified into flattened and fleshy structures are known as :**

(1) Phyllode

(2) Phylloclade

(3) Tuber

(4) All of these

150. Given below are two statements :

Statement I : Fibrous root system present in monocotyledonous

Statement II : Roots arise from parts of plants other than redicle are called adventitious roots

In the light of the above statements, choose the correct answer from the options given below

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both Statement I and Statement II are correct.

151. **Phyllode (petiole modified) is present in :**

(1) *Australian Acacia*

(2) *Opuntia*

(3) *Asparagus*

(4) *Euphorbia*

152. Choose the correct option according to given figure.

A B

(1) A – Artery : Tunica media is thin as compare to vein.

(2) A – Vein : Tunica media is thick as compare to artery.

(3) B – Artery : Tunica media is thick as compare to vein.

(4) B – Vein : Tunica media is thick as compare to artery.

153. Respiratory climactic effect is shown by which PGR:

(1) Abscisic acid

(2) Auxin

(3) Gibberellin

(4) Ethylene

154. N^6 - furfurylamino purine is :

(1) Guanine derivative

(2) Adenine derivative

(3) A stress hormone

(4) A terpene

155. Removal of apical (terminal) bud of a flowering plant leads to :

(1) Formation of new apical buds.

(2) Formation of adventitious roots on the cut side.

(3) Early flowering (or stopping of floral growth).

(4) Promotion of lateral branches.

156. **Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R)**

Assertion (A) : 2,4-D widely used to kill monocotyledonous weeds.

Reason (R) : 2,4-D does not affect mature monocotyledonous plant.

choose the correct answer from the options given below :

(1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)

(2) (A) is correct but (R) is not correct

(3) (A) is not correct but (R) is correct

(4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

157. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R)

Assertion (A) : Heterophylly in cotton, coriander and buttercup is called plasticity.

Reason (R) : In cotton, coriander and ~~buttercup~~ larkspur the leaves of the juvenile plant are different in shape from those in mature plants.

choose the correct answer from the options given below :

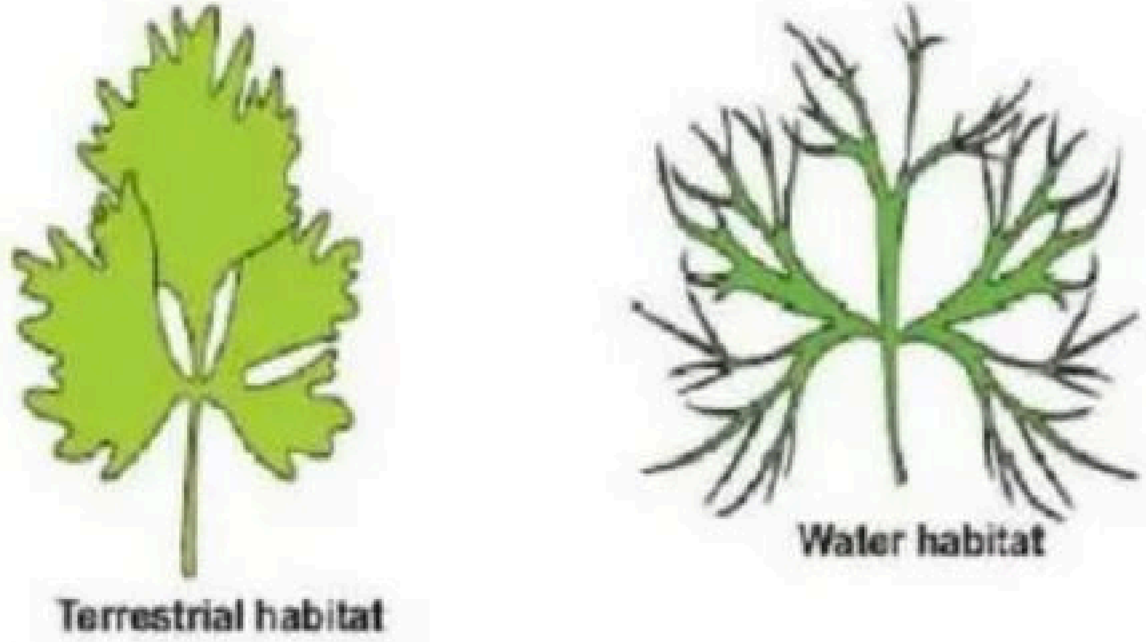
(1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)

(2) (A) is correct but (R) is not correct

(3) (A) is not correct but (R) is correct

(4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

158. In following given diagram which plant shows heterophilly:



(1) Cotton

(2) Coriandar

(3) Buttercup

(4) All of these

159. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R)

Assertion (A) : Heart failure is not the same as cardiac arrest or a heart attack.

Reason (R) : In heart failure means heart muscles is suddenly damaged by an indaquate blood supply.

choose the correct answer from the options given below :

(1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)

(2) (A) is correct but (R) is not correct

(3) (A) is not correct but (R) is correct

(4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

160. Which one of the following is correct :

(1) Blood = Plasma + RBC+WBC+Platelets

(2) Plasma = Blood + Lymphocytes

(3) Serum = Blood + Fibrinogen

(4) Lymph = Plasma + RBC + WBC

161. **Serum differs from blood in :**

(1) Lacking clotting factors

(2) Lacking antibodies

(3) Lacking globulins

(4) Lacking albumins

162. Which of the following match is wrong regarding transport of gases during respiration

(1) 97% O_2, 20-25% CO_2 RBCs

(2) 3% O2 dissolved in plasma

(3) 70% CO_2 bicarbonate

(4) 3% CO_2 dissolved in plasma

7%

163. Which is an correct statement

(a) Spirometer has clinical significance ✓

(b) A healthy man can inspire or expire approx- 6000 to 8000 ml of air per ~~second~~ min ✗

(c) Expiratory reserve volume is 1000 ml ✓

(d) Normally, expiration is a passive process ✓

(1) Only a and b

(2) Only b and c

(3) Only a, c, d ✓

(4) a, b, c, d

164. **Name the blood cells, whose reduction in number can cause clotting disorder, leading to excessive loss of blood from the body :**

(1) Erythrocytes

(2) Leucocytes

(3) Neutrophils

(4) Thrombocytes

7 • Asked by Vikash

165. Glomerulus alongwith Bowman's capsule is called:

(1) Blood corpuscle

(2) Malpighian ~~tubule~~ Body

(3) Renal corpuscle

(4) Both 2 & 3

BIOLOGYLIVE

166. **Which excretory structures are found in rotifers:**

(1) Metanephridia

(2) Kidney

(3) Protonephridia

(4) Antennal gland

167. DCT is also capable of selective secretion :

(1) Hydrogen ion

(2) Potasium ion

(3) HCO_3^-

(4) Both 1 & 2

168 Tell the wrong pair

(1) Bony fishes ammonotelic

(2) Aquatic insects ~~uricotelic~~

(3) Mammals ureotelic

(4) Reptiles uricotelic

169. Match the item given in column I with those in column II select the correct option given below :

a) Glycosuria — i) Accumulation of uric acids in joints
b) Gout — ii) Mass of crystallised salts within the kidney
c) Renal calculi — iii) Inflammation of glomeruli
d) Glomerulonephritis — iv) Presence of glucose in urine

(1) a-iii, b-ii, c-iv, d- i
(2) a-ii, b-iii, c-iii, d- iv
(3) a-i, b-ii, c-iii, d- iv
(4) a-iv, b-i, c-ii, d- iii

170. Given below are two statements :

Statement I : JGA is special sensitive region formed by cellular modification distal convulated tubule and the efferent artriole at location of their contact.

Statement-II : ANF is a powerful vasoconstrictor and can increase blood pressure.

Choose the correct answer from the option given below:

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both Statement I and Statement II are correct

171. Atrial natriuretic factor is released from

(1) Heart

(2) Kidney

(3) Lungs

(4) Brain

172. Which statement is correct :

(1) GFR in a healthy individual is approximately 125 ml/minute.

(2) The urine released per day is approx 1.5 litre

(3) In PCT 70-80 per cent of electrolytes and water are reabsorbed

(4) All of these

173. Which of the following is incorrect about mycoplasma :

(1) Mycoplasma can not survive without oxygen

(2) Mycoplasma are prokaryotic organism that completely lack cell wall

(3) Mycoplasma are pathagenic in animal and plant

(4) Mycoplasma have cell membrane

174. Match the items given in column I with those of column II and select the correct option

a) Viroids — i) Mosaic, Leaf rolling in plants
b) Prions causes — ii) Bovine spongiform encephalopath (BSE
c) Virus causes — iii) Small pox
d) Bacteriophages — iv) Potato spindle tuber disease.
v) Parasite of bacteria

(1) a-iv, b-ii, c-iii, i, d-v
(2) a-ii, b-iii, c-i, iv, d-v
(3) a-iv, b-ii, c-i, iii, d-v
(4) a-iv, b-iii, c-i, ii, d-v

175. Which of the following statements is incorrect :

(1) Sex organs are absent, but plasmogamy is brought about by fusion of two vegetative cells, found in members of class basidiomycetes.

(2) Ascospores are haploid sexual spores

(3) Example of fungi imperfacti is *Ustilago*

(4) Mycelium is branched and septate in *Penicillium*

176. Given below are two statements :

Statement I : In pteridophytes gametophyte generation is free-living, mostly photosynthetic thalloid called prothallus.

Statement II : In majority of the pteridophytes all the spores are of similar kinds

Choose the correct answer from the options given below.

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both, Statement I and Statement II are correct

177. Which of the following sexual spore does not follows the sequence of :

Plasmogamy → Dikaryon → Syngamy → Meosis

(a) Zoospore

asex

(b) Zygospore

A and B

PKM

(c) Basidiospore

(d) Ascospore

(1) a,b only
(2) b only
(3) a,b,c only
(4) a only

178. Given below are two statements :

Statement I : Appearance of recombination nodules are at pachytene.

Statement II : A pair of synapsed homologous chromosomes is called a tetrad.

Choose the correct answer from the options given below.

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both, Statement I and Statement II are correct

179. Match the items given in column I with those of column II and select the correct option given below with respect to blood :

a) Neutrophills	i) Antibodies producing
b) Basophills	ii) Associated with allergic reaction
c) Eosinophill	iii) Antibiotic producing
d) Lymphocytes	iv) Involve in inflammatory reaction
	v) Phagocytic cells

(1) a-v, b-iv, c-ii, d-iii

(2) a-v, b-iv, c-i, d-ii

(3) a-v, b-iv, c-ii, d-i

(4) a-v, b-iv, c-iii, d-ii

180. What would be the stroke volume of a person if the cardiac output is increased to 7.2 litre but heart of person beats normally as it is initially :

(1) 90 ml

(2) 80 ml

(3) 100 ml

(4) 120 ml

$$S \cdot V = \frac{C \cdot O}{H \cdot B} =$$

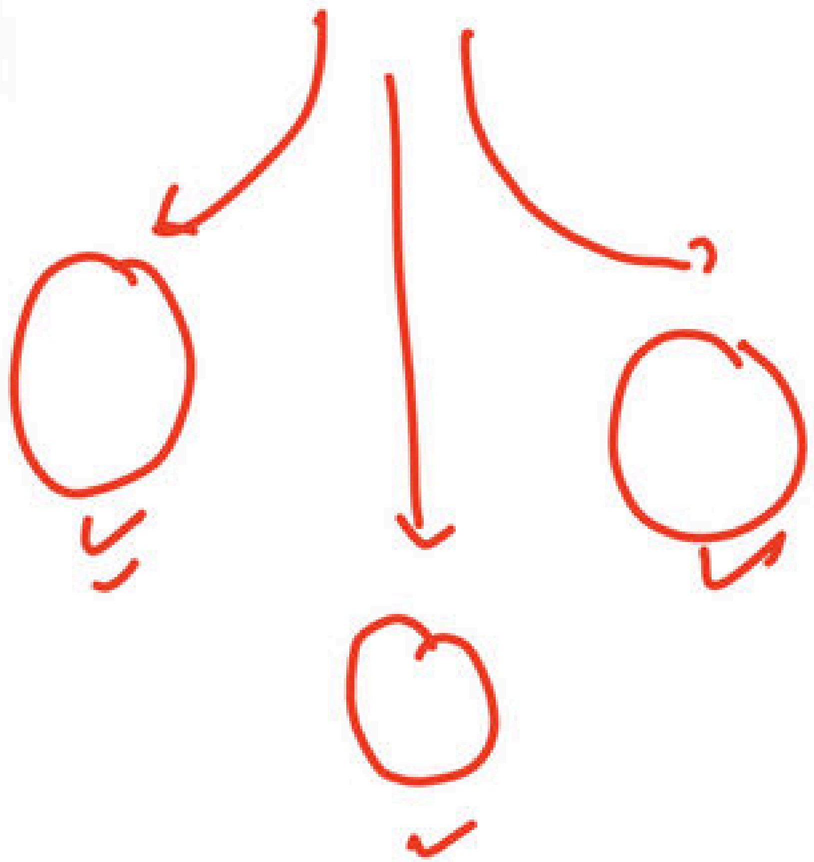
181. Erythrobtastosis foetalis is caused if the firtilization takes place between gametes of :

(1) Rh^{+} male and Rh^{-} female

(2) Rh^{+} male and Rh^{+} female

(3) Rh^{-} male and Rh^{-} female

(4) Rh^{-} maleand Rh^{+} female



Mistake

Hum B

182. Which is a correct matching set

Column-I	Column-II
a. pO_2 in the alveoli	i. 0.5 L
b. pO_2 of oxygenated blood	ii. 1 L
c. ERV	iii. 95 mm Hg
d. Tidal volume	iv. 104 mm Hg

(1) a-iv, b-iii, c-ii, d-i

(2) a-i, b-iii, c-ii, d-iv

(3) a-iii, b-ii, c-iv, d-i

(4) a-ii, b-iii, c-iv, d-i

183. The presence of ketone bodeis in urine is the indication of

(1) Renal calculi

(2) Glomerulonephritis

(3) Diabetes mellitus

(4) Normal functioning of kidney

184. **Which one of the following is the incorrect**

(1) Ribs - 24

(2) Sternum - 1

(3) Patella - Fore limb bone

(4) Appendicular skeleton - Limbs

185. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R).

Assertion (A) : Receptors associated with aortic arch and carotid artery can recognise changes in CO_2 and H^+ concentration

Reason (R) : A chemosenstive area is situated adjacent to rhythm center which is highly senstive to CO_2 and Hydrogen.

In the light of the above statements, choose the correct answer from the options given below

(1) Both (A) and (R) are true but (R) is not the correct explanation of (A)

(2) (A) is true but (R) is false

(3) (A) is false but (R) is true

(4) Both (A) and (R) are true and (R) is the correction explanation of (A)

186. Oxytocin and vasopressin are actually synthesized by the

(1) Adenohypophysis

(2) Epiphysis

(3) Hypothalamus

(4) Neurohypophysis.

187. Which hormone is amino-acid derivatives :

(1) Estrogen

(2) Epinephrine

(3) Androgens

(4) All of the above

188. Which one produces erythropoietin :

(1) Kidney

(2) Pancreas

(3) Pineal body

(4) Thyroid gland

189. Which of the following is a steroid hormone:

(1) Insulin

(2) Progesterone

(3) FSH

(4) Epinephrine

190. The scapula extends on the backside of the thorax between:

(1) 2nd and 8th rib

(2) 1st and 7th rib

(3) 2nd and 7th rib

(4) 3rd and 7th rib

191. Nissl's bodies found in neurons are :

(1) Made of DNA

(2) Masses of ribosome and RER

(3) Help in formation of neurofibrils

(4) Massews of mitochondria

192. **Dialysis fluid contains all the constituents as in plasma except**

(1) Electrolytes

(2) Proteins

(3) Nitrogenous wastes

(4) All the above.

193. Which part of human brain is concerned with the regulation of body temperature :

(1) Medulla oblongata

(2) Hypothalamus

(3) Cerebrum

(4) Cerebellum

Glue

194. Given below are two statements :

Statement I : In our body cortisol is main mineralocortecoid.

Statement II : Cortisol involved in maintaing the cardio-vascular system as well as the kidney function.

Choose the correct answer from the options given below

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both, Statement I and Statement II are correct

BIOLOGYLIVE

195. Graves' disease is caused due to :

(1) hyposecretion of thyroid gland

(2) hypersecretion of thyroid gland

(3) hyposecretion of adrenal gland

(4) hypersecretion of adrenal gland.

196. **Given below are two statements :**

Statement I : Electrical synapses are rare in our system.

Statement II : Chemicals called neurotransmitters are involved in the transmission of impulse at chemical synapses.

Choose the correct answer from the options given below

(1) Both Statement I and Statement II are incorrect

(2) Statement I is correct but Statement II is incorrect

(3) Statement I is incorrect but Statement II is correct

(4) Both, Statement I and Statement II are correct

197. **Which of the following is correctly matched :**

Common name	**Class**
(1) Housefly	Musca ×
(2) Mango	Monocotyledonae
(3) Gorilla	Mammalia
(4) Tiger	Chordata
