Important Cells In NCERT

@Allen_Aakash_Test_Papers

- **Heterocyst:** Specialised cells found in *Nostoc* & *Anabaena* which help in fixation of atmospheric nitrogen.
- **Mycoplasma:** Smallest living cell.
- **Choanocytes or Collar cells:** Found in sponges that line the spongocoel & canals.
- **Cnidoblasts/Cnidocytes:** Found in coelentrata/cnidaria which contain the stinging capsules or nematocytes.
- **Flame cells:** Found in flat worms and help in osmoregulation & excretion.
- **Statocysts:** These are balancing organs found in arthropods.
- **Root hair:** Found in zone of maturation and help in water & mineral absorption.
- **Guard cell:** Encloses stomatal aperture or pore. Bean-shaped but in grasses dumb-bell shaped.
- **Subsidiary cells:** A few epidermal cells, in the vicinity of the guard cells become specialised in their shape & size & called subsidiary cells.
- **Bundle-sheath cells:** The vascular bundles are surrounded by a layer of thick walled bundle-sheath cells.

- **Bulliform Cells:** In grasses, certain adaxial epidermis cells along the veins modify themselves into large, empty & colourless cells.
- **Chondrocytes:** Cells of cartilage.
- **Osteocytes:** Bone cells.
- **Neuroglial cells:** Found in the neural system which protect & support neurons.
- **Goblet Cells:** Present in intestinal mucosal epithelium which secrete mucus.
- **Mucus neck cells:** Present in gastric gland & secrete mucus.
- **Peptic/Chief cells:** Present in gastric gland & secrete pepsinogen.
- **Parietal/Oxyntic cells:** Present in gastric gland & secrete HCL & intrinsic factor.
- **Hepatic cells or Hepatocytes:** Found in liver.
- **JG (Juxtaglomerular) cells:** Release renin & erythropoietin hormones.

- **Neurosecretory cells (nuclei):** Found in hypothalamus, which secrete hormones.
- **Ganglion Cells:** Found in retina.
- **Bipolar Cells:** Found in retina.
- **Photoreceptor Cells:** Found in retina.
- **Rod Cells:** For twilight (scotopic vision)
- **Cone Cells:** For day light (Photopic vision)
- **Organ of Corti:** Contains hair cells.
- **Adipocytes:** Cells of adipose tissue.
- **PMNL (Polymorpho Nuclear Leukocytes):** A type of neutrophil providing cellular barrier in innate immunity.
- **Marcophages:** Present in areolar tissue that can phagocytose & destroy microbes providing cellular barrier.
- **Inner cell mass of human blastocyst:** Contains stem cells which have the potency to give rise to all the tissues & organs.
