

Class 12th Biology - 200 MCQs

NCERT Nichod : Biology Practice Series NEET 2025

1. **Carcinogens are**
- (1) Physical agents
 - (2) Chemical agents
 - (3) Biological agents
 - (4) All of these

2. Which of the following is not made by cannabis plant

- (1) Opioid
- (2) Ganja
- (3) Charas
- (4) Hashish

3. ***Saheli* a new oral contraceptives was developed by scientist of which Institutes :**

- (1) CDRI in Delhi
- (2) IIM in Lucknow
- (3) CDRI in Lucknow
- (4) CDRI in Kolkata

4. What is the work of Multiload 375

- (1) To inhibit ovulation
- (2) To inhibit insemination
- (3) To suppress fertilising capacity of sperms
- (4) To inhibit gametogenesis

5. Which one of the following is natural method of contraception :

- (1) Pills
- (2) Sterilisation
- (3) Periodic abstinence
- (4) Barrier methods

6. Which of the following is incorrect match :

- | | |
|--------------------|--------------------|
| (1) MTP | – 1971 |
| (2) Gonorrhoea | – curable STIs |
| (3) MTP | – Induced abortion |
| (4) Family planing | – 1981 |

7. Which one of the following is incorrect match :

- | | |
|-------------------|-------------|
| (1) Sterilisation | – Vasectomy |
| (2) Sterilisation | – Tubectomy |
| (3) LNG-20 | – Pills |
| (4) MTP | – 1971 |

- 8. What is the similarity among Down syndrome, Klinefelters syndrome, Turner syndrome.**
- a. All are example of a type of chromosomal disorder**
 - b. All syndrome occurs in only male individual.**
 - c. In all number of autosomal chromosome are remains same.**
 - d. In all number of chromosome are not remains same.**
- | | |
|--------------------|-------------------|
| (1) a, c, d | (2) Only a |
| (3) a, b, d | (4) a, d |

9. Which of the following are correct between sickel-cell anaemia and Thalassemia :
- (a) Both are autosomal recessive disease
 - (b) In both diseased haemoglobin molecule is affected
 - (c) Both α and β chain of the haemoglobin will be affected
 - (d) Only β chain of the haemoglobin will be affected
- | | |
|-----------|----------|
| (1) Three | (2) Four |
| (3) One | (4) Two |

10. Experimental verification of the chromosomal theory of inheritance given by :

- (1) T.H. Morgan
- (2) Tschermak
- (3) Correns
- (4) Theodore Boveri

11. Which of the following disease the phenotypic expression is mental retardation and a reduction in hair and skin pigmentation :

- (1) Phenylketonuria
- (2) Colour blindness
- (3) Haemophilia
- (4) Sickel-cell anaemia

12. In human blood groups when I^A and I^B are present together they express their own types of sugar this is because of :

- (1) Incomplete dominance
- (2) Dominance
- (3) Linkage
- (4) Codominance

13. Which one of the following is the correct match :

- (1) Bacteriophage lambda – 148502 bp
- (2) $\phi \times 174$ – 538600 bp
- (3) Bacteriophage lambda – 48502 bp
- (4) E. coli – 4.6×10^9 bp

14. In the diagram of strawberry fruit, name A and B.

- (1) A – Endocarp, B–Pome
- (2) A–Thalamus, B–pome
- (3) A–Thalamus, B–Achene
- (4) A–Mesocarp, B–Drupe

15. Which one of the following nitrogenous bases are not similar between RNA and DNA :

(1) Adenine

(2) Thymine

(3) Cytosine

(4) Guanine

16. Transforming principle given by :

- (1) Griffith (1828)
- (2) Griffith (1628)
- (3) Griffith (1928)
- (4) Griffith (1528)

17. Which one of the following is the incorrect statements with reference to eukaryotes :

- (1) Structural gene is monocistronic
- (2) The genes in eukaryotes are split
- (3) Expressed sequence are defined as introns
- (4) The exons are interrupted by introns

18. Which one of the following is correct set of non-sense/stop codons :

- (1) UAG, UGA, UUA
- (2) UAG, UGA, AUG
- (3) UAA, UAG, UGA
- (4) UAA, UGA, GUG

19. Which of the following are correct :

- (i) Thymine present in DNA**
- (ii) Adenine and guanine are purine**
- (iii) Uracil is present in RNA at the place of thymine.**
- (iv) Uracil is pyrimidine**

(1) Only i and ii

(2) Only ii and iii

(3) Only iv

(4) All of these

20. Which one of the following is not used in organic farming

(1) Snail

(2) Glomus

(3) Earthworm

(4) Oscillatoria

21. Which one of the following pairs is wrongly matched :

- (1) Alcohol - Nitrogenase
- (2) Fruit juice - Pectinase
- (3) Fermentation - Yeast
- (4) Detergent - Lipase

22. The 'Ganga Action Plan' was initiated by

- (1) Pollution control board
- (2) KVIC
- (3) The Ministry of Environment and Forests
- (4) Both 1 and 2

23. A very common method now used in agriculture to control pests on the basis of natural predation is called

- (1) Biomagnification
- (2) Bio agriculture
- (3) Biological control
- (4) Genetic engineering

24. Given below are two statements :

Statement I :

Regulation of lac operon can be visualised as regulation of enzyme synthesis by its substrate.

Statement II :

Regulation of lac operon by repressor is referred as negative regulation.

Choose the correct answer from the options given below.

- (1) Both Statement I and Statement II are incorrect
- (2) Statement I is correct but Statement II is incorrect
- (3) Statement I is incorrect but Statement II is correct
- (4) Both, Statement I and Statement II are correct

25. An exotic species that is introduced to a new area, spreads rapidly and eliminates native species is called:

- (1) An immigrant species.
- (2) An invasive species
- (3) Rare species
- (4) None of these

26. Populations evolve to maximise their reproductive fitness this is called Darwinian fitness. This is represented by :

- (1) Low 'r' value
- (2) High 'r' value
- (3) Moderate 'r' value
- (4) None of these

27. The Evil Quartet term are related with :

- (1) Biodiversity conservation
- (2) Biodiversity loss
- (3) Species area relationships
- (4) Pattern of biodiversity

28. Identify the leaf of plant :

- (1) *Opium*
- (2) *Atropa belladonna*
- (3) *Cannavis sativa*
- (4) *Datura*

29. If a new habitat is just being colonised which process may contribute more significantly to population growth :

- (1) Birth rates
- (2) Immigration
- (3) Emigration
- (4) Mortality

30. Given below are two statements :

Statement I :

Mutations are random and directionless while darwinian variations are small and directional.

Statement II :

Evolution for darwin was gradual while deVries believed mutation caused speciation and hence it saltation.

Choose the correct answer from the options given below.

- (1) Both Statement I and Statement II are incorrect
- (2) Statement I is correct but Statement II is incorrect
- (3) Statement I is incorrect but Statement II is correct
- (4) Both, Statement I and Statement II are correct

31. What is the criteria by which a ecologist declared the habitat as a hot spot -

- a. More number of endemic species must be in its habitat.**
- b. High degree of biodiversity**
- c. Large sized animal lives in its habitat**
- d. small sized animal lives in its habitat.**

(1) Only b

(2) a, b

(3) a, b, c

(4) a, b, c, d

32. Highest global biodiversity among vertebrates found in :

- (1) Reptiles
- (2) Mammals
- (3) Amphibians
- (4) Fish

33. If the female bee colour pattern change even slightly for any reason during evolution then what is the effect on orchid Ophrys.

- (1) No effect
- (2) Number of flower in orchids highly increased
- (3) One petal of orchid flower are also change to maintain the resemblance
- (4) One sepal of the orchid flower are also change to maintain the resemblance.

34. How ever when there are situations where an animal or plant is endangered or threatened (organism facing a very high risk of extinction in the wild in the near future) and needs urgent measures to save it from extinction then what is the desirable approach :

- (1) Ex situ conservation
- (2) In situ conservation
- (3) Off site conservation
- (4) More than one option is correct

35. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R)

Assertion (A) :

Each trophic level has a certain mass of living material at a particular time called as the standing crop.

Reason (R) :

The biomass of a species is not expressed in terms of fresh or dry weight.

In the light of the above statements, choose the correct answer from the options given below :

- (1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)
- (2) (A) is correct but (R) is not correct
- (3) (A) is not correct but (R) is correct
- (4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

36. Many species extinct in the last 500 years eg., passenger pigeon, steller's sea cow were due to which reason :

- (1) Over exploitation by human
- (2) Habitat loss and fragmentation
- (3) Alien species invasions
- (4) Co-extinctions

37. Which is the correct statement

- (1) More than 25 percent of the drugs derived from plants
- (2) Species area relationships observed by A.Von. Humboldt
- (3) India is the one of the 12 mega diversity countries of the world
- (4) All of the above are correct statement

38. Find the incorrect statement (s) from the following:

(a) Currently tropic rainforests cover more than 8% of earth's land surface

(b) Amazonian rainforest is being cut and cleared for soya bean cultivation

(c) Animals with migratory habits are badly affected by habitat loss and fragmentation

(d) Mammals and birds require small territories

(1) a and b

(2) a and d

(3) Only d

(4) b and c

39. How many matching are incorrects with reference to biodiversity

- | | |
|---------------------------|-------------------------|
| a. India | - 1200 species of birds |
| b. Amazonian rain forests | - 1400 species of birds |
| c. Colombia | - 1500 species of birds |
| d. Greenland | - 105 species of birds |

(1) 4

(2) 3

(3) 2

(4) 1

40. How many matching are correct

- | | |
|-----------------------------|--------------------------------|
| (a) Passenger pigeon | - Extinct animal |
| (b) Lantana | - Extinct plant |
| (c) Parthenium | - Alien animal species |
| (d) Co-extinctions | - Facultative relations |

(1) 4

(2) 3

(3) 2

(4) 1

41. Which one of the following are not major causes of biodiversity loss :

- (1) Over exploitation
- (2) Alien species invasions
- (3) Co-extinctions
- (4) None of these

42. Given below are two statements :

Statement I :

The International union for conservation of nature and natural resources (IUCN) 2004, the total number of plant and animal species described so far is slightly less than 1.5 million.

Statement II :

India has more than 50,000 genetically different strains of rice, and 1,000 varieties of mango.

Choose the correct answer from the options given below.

- (1) Both Statement I and Statement II are incorrect
- (2) Statement I is correct but Statement II is incorrect
- (3) Statement I is incorrect but Statement II is correct
- (4) Both, Statement I and Statement II are correct

43. What is the correct species-area relationship on logarithmic scale :

- (1) $\log C = \log S + Z \log A$
- (2) $\log Z = \log S + C \log A$
- (3) $\log S = \log C + Z \log A$
- (4) $\log Z = \log C + S \log A$

44. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R).

Assertion (A):

Plants offer rewards or fees in the form of pollen and nectar for pollinators and juicy and nutritious fruits for seed dispersers.

Reason (R) :

The wasp pollinates the fig inflorescence while searching for suitable egg laying site.

In the light of the above statements, choose the most appropriate answer from the options given below :

- (1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)
- (2) (A) is correct but (R) is not correct
- (3) (A) is not correct but (R) is correct
- (4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

- 45. Which of the following is correct for allele:**
- i. Alternative form of gene is known as allele**
 - ii. A pair of allele governing a specific character such as tallness or dwarfness**
 - iii. Allele combination may be homozygous may be heterozygous**
 - iv. Allele may be dominant may be recessive**
 - v. Allele is said to be dominant if it is expressed in both homozygous and heterozygous**
- (1) Only i and ii correct (2) Only ii and iii correct
(3) i, ii iii, iv, v correct (4) Only iii and iv correct

46. Breakbone fever is an alternate name of :

- (1) Malaria
- (2) Yellow fever
- (3) Dengue fever
- (4) None of these

47. The vector of breakbone fever is :

- (1) Culex
- (2) Aedes
- (3) Anopheles
- (4) None of these

48. How does Neo-Darwinism align with modern biology :

- (1) Rejects modern biology
- (2) Ignores genetics
- (3) Integrates genetics, molecular biology, and paleontology
- (4) Focuses only paleontology

49. Dengue fever is caused by:

(1) Virus

(2) Bacteria

(3) Entamoeba

(4) Plasmodium

50. Incubation period of dengue fever is :

- (1) 1 day
- (2) 1 year
- (3) 5 to 8 year
- (4) 5 to 7 day

51. In the logistic growth equation K stands for

- (1) intrinsic rate of natural increase
- (2) carrying capacity
- (3) intrinsic rate of natural decrease
- (4) population density at time t

52. Warblers "resource partitioning" was explained by

- (1) Gause
- (2) Connell
- (3) MacArthur
- (4) Tilman

53. Hepatitis B vaccine produced from :

- (1) *E.coli*
- (2) Human
- (3) Mice
- (4) Yeast

54. Which type of antibody is produced during allergic reactions

(1) IgG

(2) IgM

(3) IgA

(4) IgE

55. Which of the following is an autoimmune disease

- (1) Cancer
- (2) Pneumonia
- (3) Common cold
- (4) Rheumatoid arthritis

56. AIDS infection is characterised by

- (1) Decrease of T_C lymphocytes
- (2) Increase of T_H lymphocytes
- (3) Decrease of T_H lymphocytes
- (4) Increase of T_C lymphocytes

57. Which cells of body is known as HIV factory

- (1) Lymphocytes
- (2) Macrophages
- (3) Eosinophils
- (4) Basophils

58. Given below are two statements

Statement I :

Zoological parks, botanical gardens and wildlife safari parks serve Ex situ Conservation of organism.

Statement II :

Now gametes of threatened species can be preserved in viable and fertile condition for long periods using cryopreservation techniques

In the light of the above statements, choose the correct answer from the options given below

- (1) Both Statement I and Statement II are incorrect
- (2) Statement I is correct but Statement II is incorrect
- (3) Statement I is incorrect but Statement II is correct
- (4) Both, Statement I and Statement are correct

59. Given below are two statements :

Statement I :

The enzyme extends the primers using the nucleotides provided in the reaction and the genomic DNA as template.

Statement II :

If the process of replication of DNA is repeated many times, the segment of DNA can be amplified to approximately billion times, i.e., 1 billion copies are made in 30 cycle.

In the light of the above statements, choose the correct answer from the options given below

- (1) Both Statement I and Statement II are incorrect
- (2) Statement I is correct but Statement II is incorrect
- (3) Statement I is incorrect but Statement II is correct
- (4) Both, Statement I and Statement are correct

60. In the given below example :

How many cells are haploid, Diploid, Triploid, respectively in Angiosperms.

Megaspore, microspore, MMC, zygote, endosperm, pollen grain, generative cell, vegetative cell, nucellus, functional megaspore, synergid, PMC.

(1) 7, 4, 1

(2) 7, 2, 4

(3) 6, 4, 3

(4) 2, 4, 7

61. Which of the following statements are correct with reference to papaya plants :

- a. Autogamy not occur**
- b. Geitonogamy not occur**
- c. Xenogamy occur**
- d. It is show dioecy**

- (1) only a,c,d**
- (2) only b, c, d**
- (3) only c, d**
- (4) a, b, c, d**

62. Which one of the following is correct match :

- | | | |
|----------------------------|---|------------------------|
| (1) Pollen grain viability | – | 30 minutes in Rosaceae |
| (2) Many ovule in ovary | – | Mango |
| (3) One ovule in ovary | – | Paddy |
| (4) Placenta | – | Androecium |

63. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R)

Assertion (A) :

Bt toxin is produced by bacterium called *Bacillus thuringiensis*.

Reason (R) :

Genes cry I Ac and cry II Ab controls the cotton bollworms.

In the light of the above statements, choose the correct answer from the options given below :

- (1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)
- (2) (A) is correct but (R) is not correct
- (3) (A) is not correct but (R) is correct
- (4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

64. Which one of the following is correct match :

a. Anatropous

b. Gecko lizard

c. Tallest flower

d. Bisexual flower

i. Amorphophallus

ii. Ovule

iii. Pollinator

iv. Emasculation

(1) a-i, b-ii, c-iii, d-iv

(2) a-ii, b-iii, c-i, d-iv

(3) a-i, b-iii, c-ii, d-iv

(4) a-iii, b-i, c-ii, d-iv

65. Normally placenta is formed by the interdigitation of :

- (1) Chorionic villi with trophoblast
- (2) Chorionic villi with fallopian tube wall
- (3) Chorionic villi with uterine tissue
- (4) Chorionic villi with inner cell mass

66. Which cells have the potency to give rise to all the tissues and organs :

- (1) Peptic cell
- (2) Stem cells
- (3) G. cell
- (4) Oxyntic cell

67. The testis are situated outside the abdominal cavity within a pouch called :

- (1) Scrotum
- (2) Urethral meatus
- (3) Interstitial space
- (4) Cervical canal

68. Which one of the following matching is correct

- | | |
|------------------------|---------------------|
| a. Cleavage | (i) Zygote |
| b. Implantation | (ii) Daughter cells |
| c. Blastomeres | (iii) Uterus |
| d. Perivitelline space | (iv) Ovum |

- (1) a-i, b-iii, c-ii, d-iv
(2) a-iii, b-i, c-iv, d-ii
(3) a-i, b-ii, c-iv, d-iii
(4) a-i, b-iii, c-iv, d-ii

69. Which one of the following is correct matching

- | | |
|---------------------|--------------------------------|
| a. male germ cells | (i) Testis |
| b. Clitoris | (ii) Female external genitalia |
| c. Lactiferous duct | (iii) Mammary gland |
| d. Accessory duct | (iv) Uterus |

- (1) a-i, b-ii, c-iii, d-iv
(2) a-iii, b-i, c-ii, d-iv
(3) a-i, b-iv, c-iii, d-ii
(4) a-iii, b-iv, c-ii, d-i

70. How many matching are correct

- | | |
|---------------------------|----------------------------|
| a. Antrum | - Tertiary follicle |
| b. Polar body | - Spermatogenesis |
| c. Granulosa cells | - Primary follicle |
| d. Oogonia | - 46 chromosome |

(1) 4

(2) 3

(3) 2

(4) 1

71. Which one of the following is the function of placenta:

- (1) Facilitates removal of carbon dioxide and waste material from embryo
- (2) Facilitates supply of oxygen and nutrients to embryo
- (3) Secrete estrogen
- (4) All of these

72. Match the development of the foetus in accordance with its correct time during pregnancy.

- (1) 8 weeks - heart formation
- (2) 12 weeks - limbs and digits are formed
- (3) 24 weeks - eyelids separate and eyelashes are formed
- (4) 24 weeks - external genital organs

73. In human beings menstrual cycle ceases in

- (1) Childhood
- (2) Puberty
- (3) 30-35 years
- (4) Around 50 years

74. At puberty the primary follicle left in each ovary

- (1) 10000 - 20000
- (2) 6000 - 8000
- (3) 60000 - 80000
- (4) 160000 - 180000

75. In sperm which structure filled with enzymes that help in fertilisation of ovum

- (1) Middle piece
- (2) Tail
- (3) Acrosome
- (4) Antrum

76. The spermatids are transformed into spermatozoa by the process called

- (1) Spermiogenesis
- (2) Spermiation
- (3) Encystation
- (4) Sporulation

77. Each ovary is connected to the pelvic wall and uterus by

- (1) Tendons
- (2) Muscle
- (3) Ligaments
- (4) Areolar tissue

78. The male external genitalia is

- (1) Rete testis
- (2) Testis
- (3) Penis
- (4) Prostate

79. Which one of the following is not the constituent of seminal plasma

- (1) Fructose
- (2) Calcium
- (3) Nitrogen
- (4) Certain enzymes

80. Which one of the following is incorrect match

- | | |
|------------------------|-------------------------|
| (1) Graffian follicle | - corpus luteum |
| (2) Menarche | - menstrual cycle start |
| (3) Menopause | - Menstrual cycle stop |
| (4) interstitial cells | - Sertoli cells |

81. How many matching are correct

- | | |
|----------------------------|----------------------------|
| a. Relaxin | - Ovary |
| b. Estrogens | - Placenta |
| c. Estrogens | - Graffian Follicle |
| d. Follicular phase | - secretory phase |

(1) 4

(2) 3

(3) 2

(4) 1

82. For obtaining appreciable quantities of products through biotechnology how much culture can be processed in bioreactors :

- (1) 100 – 1000 litres
- (2) 1000 – 10000 litres
- (3) 500 litres
- (4) 10 – 20 litres

83. An enzyme catalysing the removal of nucleotides from the ends of DNA is:

- (1) Endonuclease
- (2) Exonuclease
- (3) DNA ligase
- (4) Hind - II

84. The most important feature in a plasmid to be used as a vector is:

- (1) Origin of replication (ori)
- (2) Presence of a selectable marker
- (3) Presence of sites for restriction endonuclease
- (4) Its size

85. Restriction enzymes belong to a larger class of enzymes called as

- (1) Nucleases
- (2) Exonucleases
- (3) Endonucleases
- (4) All of these

86. Cell wall of bacteria can be lysed by

- (1) Lysozyme
- (2) Cellulase
- (3) Chitinase
- (4) Lignase

87. The virus of dengue fever is transmitted by bite of

(1) Ascariasis

(2) Mosquito

(3) Amoebiasis

(4) Filariasis

88. Which category of the Red Data Book impiles a species at the highest risk of extinction :

- (1) Endangered
- (2) Vulnerable
- (3) Criticccally Endangered
- (4) Near threatended

89. What does the term "Extinct in the Wild" mean in the Red Data Book :

- (1) The species has gone extinct due to natural causes.
- (2) The species only exists in zoos or captivity.
- (3) The species is critically endangered.
- (4) The species is on the brink of extinction.

90. The primary purpose of the Red Data Book is to :

- (1) Document all species that ever existed.
- (2) Protect only charismatic species.
- (3) Raise awareness about conservation needs.
- (4) List species based on their population size

91. What is the significance of the Red data Book in conservation efforts :

- (1) It designates species based on their coloration.
- (2) It informs about species only found in specific regions.
- (3) It guides actions to protect and conserve threatened species.
- (4) It lists species primarily based on their habitat preference.

92. Malarial parasite attacks on which after liver in body

- (1) WBC
- (2) RBC
- (3) lungs
- (4) brain

93. Malarial parasite requires which of the following host to complete its life cycle

- (1) Human
- (2) Female mosquito
- (3) House fly
- (4) Both 1 and 2

94. Entamoeba histolytica is a parasite of which human body part

(1) Stomach

(2) Small intestine

(3) Large intestine

(4) Liver

95. Symptoms of ascariasis are

- (1) Internal bleeding
- (2) Muscular pain
- (3) Anaemia and blockage of intestinal path
- (4) All of these

96. Ringworm infection is spread by

- (1) Mosquito bite
- (2) Eating contaminated food
- (3) Using comb, towel or clothes of infected person
- (4) Nasal discharge droplets of infected person

97. In tetanus for quick immune response injection is given containing

- (1) Antibody to the toxin
- (2) Antigen toxin
- (3) Penicillin
- (4) None of these

98. Which tumors remain localized and do not spread to other parts

- (1) Malignant tumor
- (2) Benign tumor
- (3) Both 1 and 2
- (4) None of these

99. In which parts of body due to high quantity of alcohol consumption cirrhosis disease is appears

- (1) Lungs
- (2) Liver
- (3) Brain
- (4) Heart

100. The most accepted line of descent in human evolution is

- (1) *Australopithecus* → *Ramapithecus* → *Homo sapiens* → *Homo habilis*
- (2) *Homo erectus* → *Homo habilis* → *Homo sapiens*
- (3) *Ramapithecus* → *Homo habilis* → *Homo erectus* → *Homo sapiens*
- (4) *Australopithecus* → *Ramapithecus* → *Homo erectus* → *Homo habilis* → *Homo sapiens*

101. Variations during mutations of meiotic recombination are:

- (1) Random and directionless
- (2) Random and directional
- (3) Random and small
- (4) Random, small and directional

102. Which one of the following is the incorrect matched

- (1) Emergency contraceptives – 7 days
- (2) Barrier – Female condoms
- (3) Barrier – Vaults
- (4) ART – ICSI

103. Match the following -

Column I

- a. Lepidopterans
- b. Coleopterans
- c. Dipterans
- d. crylAb

Column II

- i. Beetles
- ii. Armyworm
- iii. Corn borer
- iv. Mosquitoes

- (1) a-iii, b-i, c-iv, d-ii
- (2) a-ii, b-i, c-iv, d-iii
- (3) a-i, b-iv, c-ii, d-iii
- (4) a-iv, b-i, c-ii, d-iii

104. What is Blastomeres

- (1) Newly formed Daughter cells
- (2) Newly formed flower
- (3) A type of bacterial cell
- (4) A type of proteins

105. How many are the correct match

- a. Hershey – chase experiment → Radioactive element
- b. Hershey – chase experiment → Heavy isotope element
- c. Meselson – Stahl experiment → Radioactive element
- d. Hershy – chase experiment → Virus is used

(1) 3

(2) 2

(3) 4

(4) 1

106. Which one of the following is the incorrect match:

- (1) High level of cortisol – Support pregnancy
- (2) Cortisol – Placenta
- (3) Estrogen – Placenta
- (4) Stem cells – Totipotency

107. How many matching are corrects :

- | | |
|-------------------------------|---|
| a. Haemophilia | – Queen victoria pedigree |
| b. Phenylketonuria | – Inborn error of metabolism |
| c. Colour blindness | – More appears in female than male |
| d. Sickel cell anaemia | – Shape of RBC is biconvex disc |

(1) 3

(2) 4

(3) 2

(4) 1

108. Process of degradation of detritus by bacterial and fungal enzymes into inorganic substances is called:

- (1) Leaching
- (2) Anabolism
- (3) Catabolism
- (4) Fragmentation.

109. Which one of the following is correct statement

- (1) A given species may occupy more than one trophic level in the same ecosystem
- (2) A given species always occupy only one trophic level in the same ecosystem
- (3) A given species may not occupy more than one trophic level in the same ecosystem
- (4) Both 1 and 2

110. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R).

Assertion (A):

Cuscuta, a parasitic plant that is commonly found growing on hedge, has its chlorophyll and leaves in the course of evolution.

Reason (R) :

The female mosquito is not considered a parasite, although it needs our blood for reproduction.

In the light of the above statements, choose the most appropriate answer from the options given below :

- (1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)
- (2) (A) is correct but (R) is not correct
- (3) (A) is not correct but (R) is correct
- (4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

111. Match the following columns :

Column – I

Column – II

- | | |
|------------------------|---------------|
| (a) RNA polymerase –I | (i) tRNAs |
| (b) RNA polymerase–II | (ii) rRNAs |
| (c) RNA polymerase–III | (iii) 5srRNAs |
| | (iv) Sn RNAs |
| | (v) hn RNAs |

- (1) a-ii, b-i, iii, iv, c-v
- (2) a-ii, b-v, c-i, iii, iv
- (3) a-v, b-i, iii, iv, c-ii
- (4) a-i, b-ii, c-iii, iv

112. The chemical nature of severo Ochoa enzyme is :

- (1) Polynucleotide transacetylase
- (2) Polynucleotide phosphorylase
- (3) Polypeptide phosphorylase
- (4) Ribonucleotidase

113. Given below are two statements : one is labelled as **Assertion (A)** and the other is labelled as **Reason (R)**.

Assertion (A):

In general herbivores and plants appear to be less adversely affected by competition than carnivores.

Reason (R) :

Many plants produce and store chemical that make the herbivore sick when they are eaten.

In the light of the above statements, choose the most appropriate answer from the options given below :

- (1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)
- (2) (A) is correct but (R) is not correct
- (3) (A) is not correct but (R) is correct
- (4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

114. Which one of the following is not a biofertilizer :

(1) *Anabaena*

(2) *Agrobacterium*

(3) *Rhizobium*

(4) *Nostoc*

115. Downstream processing of drug include :

- (1) Separation
- (2) Purification
- (3) Clinical trials
- (4) All of these

116. Which one of the following is correct match :

a. Stamen

i. Ovary

b. Germ pore

ii. Pollen grain

c. Parthenium

iii. Sporogenous tissue

d. Locule

iv. Pollen allergy

(1) a-i, b-ii, c-iii, d-iv

(2) a-ii, b-i, c-iii, d-iv

(3) a-iii, b-ii, c-iv, d-i

(4) a-i, b-iii, c-ii, d-iv

117. Which one of the following is incorrect match :

- | | |
|------------------|-----------------------------|
| (1) Clitoris | – Female external genitalia |
| (2) Acrosome | – Sperm |
| (3) Labia minora | – Female external genitalia |
| (4) Fimbriae | – Male external genitalia |

118. Which one of the following is the incorrect match:

- (1) Universe – 20 billion years old
- (2) Universe – 20 trillion years old
- (3) Earth – 4.5 billion years old
- (4) Bigbang theory – Origin of universe

119. Which one of the following is the incorrect match:

- (1) Histone octamer – 200 bp
- (2) Typical mammalian cell – 2.2 metres DNA
- (3) Nucleoid – In Prokaryotes
- (4) Histones – Basic protein

120. Which one of the following is the correct match :

- | | |
|---------------------------|------------------------------|
| a. Colostrum | i. CMI |
| b. Vaccination | ii. Passive immunity |
| c. Graft rejection | iii. Humoral immunity |
| d. Antibody | iv. Active immunity |

- (1) a-i, b-ii, c-iii, d-iv
(2) a-ii, b-iv, c-i, d-iii
(3) a-iii, b-ii, c-iv, d-i
(4) a-i, b-ii, c-iv, d-iii

121. Given below are two statements :

Statement I :

ELISA is based on the principle of antigen-antibody interaction.

Statement II :

Transgenic rats rabbits, pigs, sheep, cows and fish have been produced, although over 95 percent of all existing transgenic animals are mice.

Choose the correct answer from the options given below.

- (1) Both Statement I and Statement II are incorrect
- (2) Statement I is correct but Statement II is incorrect
- (3) Statement I is incorrect but Statement II is correct
- (4) Both, Statement I and Statement II are correct

122. Which one of the following is incorrect statement:

- (1) Relaxin hormone secreted from ovary
- (2) Prolactin hormone secreted from placenta
- (3) The inner cell mass differentiates into embryo
- (4) Relaxin hormone secreted from placenta

123. Red green colour blindness in human beings is governed by a sex-linked recessive gene. A normal woman whose father was colour blind marries a colour blind man. What proportion of their daughters is expected to be colour blind:

- (1) 0 %
- (2) 50 %
- (3) 25 %
- (4) 100 %

124. α -Thalassemia is controlled by two closely linked genes. This gene are :

- (1) HBA11 and HBA12
- (2) HBA1 and HBA3
- (3) HBB1 and HBB2
- (4) HBA1 and HBA2

125. In *E.coli* the DNA polymerase completes polymerisation in the direction :

(1) $3' \rightarrow 5'$

(2) $5' \rightarrow 3'$

(3) $5' \rightarrow 5'$

(4) $3' \rightarrow 3'$

126. Given below are two statements :

Statement I :

Nucleases enzyme is a restriction enzyme belong to a larger class.

Statement II :

Each restriction endonuclease functions by inspecting the length of a DNA sequence.

Choose the correct answer from the options given below.

- (1) Both Statement I and Statement II are incorrect
- (2) Statement I is correct but Statement II is incorrect
- (3) Statement I is incorrect but Statement II is correct
- (4) Both, Statement I and Statement II are correct

127. Use of bioresources by multinational companies and organisations without authorisation from the concerned country and its people is called :

- (1) Bio-infringement
- (2) Biopiracy
- (3) Biodegradation
- (4) Bioexploitation

128. Comparing asexual reproduction with sexual reproduction, which among the following is incorrect :

- (1) Former provide opportunities for variations and formulation of unique combination of genetic set – up
- (2) Later provides opportunities for variations and formulation of same combination of genetic set – up, which are always beneficial to the organism as well as population
- (3) Sexual reproduction preserves genetic information
- (4) All of these

129. What is the similarity between genital warts and genital herpes :

- a. Both are curable disease**
- b. Both are RTI**
- c. Both are STIs**
- d. Both are non curable disease**

(1) a, b, c

(2) b, c, d

(3) Only c

(4) b, c

130. HGP was closely associated with the rapid development of a new area in biology called :

- (1) Bioremediation
- (2) Tissue culture
- (3) Bioinformatics
- (4) Plant breeding

131. The adenovirus causes directly :

- (1) Respiratory infections
- (2) Heart infections
- (3) Cancer
- (4) Kidney infections

132. The total restriction site are present in pBR³²²

- (1) 6
- (2) 4
- (3) 8
- (4) 5

133. Which of the following statement is Incorrect :

- (1) In chasmogamous flowers always autogamy occur
- (2) In chasmogamous flowers always geitonogamy occurs
- (3) In chasmogamous flowers autogamy is never occur
- (4) All of these

134. Which one of the following contraceptive method blocks gamete transport in accessory duct :

(1) Sterilisation

(2) Pills

(3) Saheli

(4) Both 1 and 3

135. Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R).

Assertion (A):

The innermost wall layer is the tapetum.

Reason (R) :

It nourishes the developing pollen grains.

In the light of the above statements, choose the most appropriate answer from the options given below :

- (1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)
- (2) (A) is correct but (R) is not correct
- (3) (A) is not correct but (R) is correct
- (4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

136. Which of the following statements is wrong:

- (1) A stable community should show much variation in productivity from year -to-year
- (2) According to Tillman's long-term ecosystem experiments increased diversity contributed to higher productivity
- (3) Stable community must be resistant to occasional disturbances
- (4) Rich biodiversity is essential for ecosystem health

137. Which one of the following statements is not true

- (1) Apomixis is sexual reproduction that mimics asexual reproduction
- (2) Pollen grains are rich in nutrients, and they are used in the form of tablets and syrups
- (3) Pollen grains cause severe allergies and bronchial afflictions in some people
- (4) The flowers pollinated by flies and beetle secrete foul odour to attract them

138. Which of the following categories in the red Data book signifies the lowest risk level :

- (1) Critically Endangered
- (2) Endangered
- (3) Least Concern
- (4) Vulnerable

139. The Red Data Book mainly aims to :

- (1) Sell information about endangered species.
- (2) Document species for academic research only.
- (3) Conserve and prevent extinction of threatened species.
- (4) Categorize species solely based on their size.

140. Which factor does not contribute to a species listed in the Red Data Book :

- (1) Rapid population growth
- (2) Habitat destruction
- (3) Climate change
- (4) Overhunting and poaching

141. What does Neo-darwinism build upon :

- (1) Lamarck's theory
- (2) Mendel's genetics
- (3) Darwin's theory of evolution
- (4) Paleontological principles

142. According to Neo-Darwinism, what is considered the raw material for natural selection :

- | | |
|-----------------------|----------------|
| (1) Genetic variation | (2) Mutation |
| (3) Gradual changes | (4) Adaptation |

143. Embryological support for evolution was proposed by :

- (1) Karl Ernst Von Baer
- (2) Ernst Haeckel
- (3) Lamarck
- (4) Hugo de vries

144. What is the meaning of saltation :

- (1) Small step large mutation
- (2) Large step large mutation
- (3) Single step large mutation
- (4) Single step small mutation

145. Which is the correct statement :

- (1) In most ecosystems all the pyramids of number, energy and biomass are not upright
- (2) Pyramid of numbers is inverted in a tree ecosystem
- (3) Pyramid of biomass is generally upright in sea
- (4) Pyramid of energy may be inverted

146. The technique called Gamete Intra Fallopiian Transfer (GIFT) is recommended for those females:

- (1) Who can not produce an ovum
- (2) Who can not retain the foetus inside uterus
- (3) Whose cervical canal is too narrow to allow passage for the sperms
- (4) Who can not provide suitable environment for fertilization

147. Full form of ICSI is :

- (1) Inter Cytoplasmic Sperm Insemination
- (2) Intra Cytoplasmic Sperm Injection
- (3) Intra Cervical Sperm Injection
- (4) Inter Cervical Sperm Injection

148. Total types of cells are present in embryo sac :

- (1) 3
- (2) 4
- (3) 2
- (4) 5

149. Assertion : Apple, strawberry, are a type of false fruits.

Reason : In apple, strawberry fruits thalamus do not contribute for fruits formation.

- (1) Both (A) and (R) are true but (R) is not the correct explanation of (A)
- (2) (A) is true but (R) is false
- (3) (A) is false but (R) is true
- (4) Both (A) and (R) are true and (R) is the correct explanation of (A)

150. Increased levels of several hormones in maternal blood are necessary

- (1) supporting fetal growth
- (2) maintenance of pregnancy
- (3) supporting metabolic changes in mother
- (4) All of these

151. In dihybrid experiment on garden peas worked by mendel. What is the % of yellow round seed :

- (1) 56.25%
- (2) 12.5%
- (3) 25%
- (4) 37.5%

152. In a cross in *Drosophila*, the heterozygous animal with grey body (b^+) and long wings (vg^+) was crossed with an animal with black body and vestigial wings. The progeny of the animals is in the following ratio : Grey vestigial 24; grey long 126; black long 36; black vestigial 114. What is the frequency of recombinants in the population

(1) 15.8

(2) 16.7

(3) 17.5

(4) 20

153. The genetic disorder where point mutation is observed:

- (1) Down syndrome
- (2) Turner's syndrome
- (3) Sickle cell Anaemia
- (4) Klinefelter's syndrome

154. In transcription unit the promoter is located towards 5' end while terminator is located towards 3' end, the reference is made with respect to the

- (1) Polarity of non-coding strand
- (2) Polarity of template strand
- (3) Polarity of coding strand
- (4) Both 1 and 2

155. Which of the following incorrect for salient features of double helix structure of B DNA:

- i. It is made by one nucleotide chain**
- ii. Back bone is made by sugar and phosphate and bases project out side**
- iii. Two chains have parallel same polarity**
- iv. 15 bp are present in each turn**

- (1) Only i and ii incorrect
- (2) Only ii and iv incorrect
- (3) Only i, ii and iv incorrect
- (4) All are incorrect

156. In *E.coli*, during lactose metabolism, in absence of inducer, repressor protein binds to :

- (1) Regulator gene
- (2) Operator
- (3) Structural gene
- (4) Promoter

157. If a sample of B-DNA which length are 5.1 metre then number of base pairs present in this sample:

(1) 6.6×10^{10}

(2) 1.5×10^{10}

(3) 2×10^9

(4) 1.5×10^9

158. Which organ is infected by Rhino virus :

(1) Nose

(2) GIT

(3) Lungs

(4) CNS

159. Which one of the following is a kind of lymphoid tissue :

(1) CT

(2) MALT

(3) RTI

(4) TCT

160. EcoRI cuts DNA between bases G and A only when

- (1) AAGTTC is present in DNA
- (2) GATTC is present in DNA
- (3) GAATTC is present in ribonucleic acid
- (4) GAATTC is present in DNA

161. The given below figure is the diagrammatic representation of the *E.coli* vector pBR 322. Which one of the given options correctly identifies its certain component (s):

- (1) Hind III, EcoRI - selectable markers
- (2) amp^R , tet^R - antibiotic resistance genes
- (3) ori-original restriction enzyme
- (4) rop - reduced osmotic pressure

162. Primary sewage treatment is mainly a :

- (1) Biological process
- (2) Physical process
- (3) Physico - chemical process
- (4) Chemical process

163. Choose the drug correctly matched with its producer and function:

- (1) Blood pressure controlling agent → Streptokinase → produced by protozoa
- (2) Immunosuppressant agent → Streptokinase → produced by fungus
- (3) Blood-cholesterol lowering agent → Statins → produced by yeast
- (4) Clot buster → Cyclosporin A → produced by fungus

164. Given below are two statements :

Statement I :

The nucleus of the functional megaspore divide mitotically to forms two nuclei which move to the opposite poles, forming the 2-nucleate embryo sac.

Statement II :

A typical angiosperm embryo sac at maturity, though 8-nucleate is 7 celled.

Choose the correct answer from the options given below.

- (1) Both Statement I and Statement II are incorrect
- (2) Statement I is correct but Statement II is incorrect
- (3) Statement I is incorrect but Statement II is correct
- (4) Both, Statement I and Statement II are correct

165. In which of the following, both pairs have correct combination :

(1) In situ conservation : Seed Bank

Ex situ conservation : National Park

(2) In situ conservation : Tissue culture

Ex situ conservation : Sacred groves

(3) In situ conservation : National Park

Ex situ conservation : Botanical Garden

(4) In situ conservation : Cryopreservation

Ex situ conservation : Wildlife Sanctuary

166. Choose the incorrect statement :

- (1) Mendel selected 14 true breeding pea plant varieties
- (2) Factors occurs in pairs
- (3) The laws of dominance is used to explain the expression of only one of the parental characters in monohybrid cross in the F_2 and the expression of both in the F_1 .
- (4) Alfred sturtevant mapped the position of genes on the chromosome

167. Which one of the following is not infectious disease:

- (1) Malaria
- (2) Syphilis
- (3) Cancer
- (4) HIV

168. Given below are two statements :

Statement I :

Both LH and FSH attain a peak level in the middle of cycle.

Statement II :

In the absence of fertilization the corpus luteum degenerates.

Choose the correct answer from the options given below.

- (1) Both Statement I and Statement II are incorrect
- (2) Statement I is correct but Statement II is incorrect
- (3) Statement I is incorrect but Statement II is correct
- (4) Both, Statement I and Statement II are correct

169. The normal *E. coli* cells carry resistance against which antibiotics :

- (1) Do not carry resistance
- (2) Ampicillin
- (3) Tetracycline
- (4) Chloramphenicol

170. What is meaning of T in Ti plasmid :

- (1) Thyroid
- (2) Temperature
- (3) Thymus
- (4) Tumor

171. Trichomoniasis is not a :

- (1) STIs
- (2) ART
- (3) VD
- (4) RTI

172. What is correct sequence of packaging of DNA helix :

- (1) DNA → Nucleosome → Chromatin → Chromosomes
- (2) DNA → Nucleosome → Chromosomes → Chromatin
- (3) DNA → Chromatin → Nucleosome → Chromosomes
- (4) None of these

173. Tree → Small insects → Small Birds → Large Bird:

In this food chain energy flow will be :

- (1) First increases then decreases
- (2) First decreases then increases
- (3) Increases at successive trophic level
- (4) Decreases at successive trophic level

174. UTR is :

- (1) DNA sequence
- (2) Amino acid sequence in protein
- (3) Carbohydrates
- (4) RNA sequence

175. What is correct about amensalism :

- (1) One species is harmed and other is unaffected
- (2) One species is harmed and other is benefitted
- (3) One species is benefitted and other is neither benefitted nor harmed
- (4) One species is harmed and other is partially benefitted.

176. Which is a correct statement :

- (1) Pneumonia is a disease of stomach
- (2) Malaria is transmitted by droplet infection
- (3) Colostrum provides passive immunity
- (4) Typhoid transmitted by droplet infection

177. Which of the following statements would be correct for RNAi technique:

- (1) It was first devised for protecting the roots of tobacco plant from fungus *Meloidogyne incognitia*.
- (2) RNAi takes place in all living organisms as a method of cellular defense.
- (3) Pest-specific genes are inserted into the host plant by *Agrobacterium* vectors, which produce both sense and anti-sense RNA.
- (4) The specific mRNA of the pest is silenced by the dsDNA.

178. Which of the following statement is/are incorrect :

- i. Homo erectus fossils discovered in Java
- ii. The Neanderthal man probably lived in East and central Asia
- iii. Darwin judged the fitness of an individual by ability of defend itself
- iv. Industrial melanism was highlighted in *Biston betularia*

- (1) i and ii only
- (2) iii and iv only
- (3) iii only
- (4) i, ii, iii and iv

179. Which one of the following is the incorrect statement :

- (1) Ploidy of perisperm is diploid
- (2) Ploidy of perisperm and nucellus are diploid
- (3) Ploidy of perisperm and synergid are haploid
- (4) Guava is a fleshy fruit

180. Assertion : In gel electrophoresis DNA moves towards the anode.

Reason : DNA is a negatively charged molecule

- (1) Both (A) and (R) are true but (R) is not the correct explanation of (A)
- (2) (A) is true but (R) is false
- (3) (A) is false but (R) is true
- (4) Both (A) and (R) are true and (R) is the correct explanation of (A)

181. Given below are two statements : one is labelled as **Assertion (A)** and the other is labelled as **Reason (R)**.

Assertion (A):

Amniocentesis is procedure is used to test for the presence of certain genetic disorders, such as down syndrome haemophilia, sickle-cell anemia etc determine the survivability of the foetus.

Reason (R) :

The trophoblast layer then gets attached to the endometrium and the inner cell mass gets differentiated as the embryo.

In the light of the above statements, choose the most appropriate answer from the options given below :

- (1) Both (A) and (R) are correct but (R) is not the correct explanation of (A)
- (2) (A) is correct but (R) is not correct
- (3) (A) is not correct but (R) is correct
- (4) Both (A) and (R) are correct and (R) is the correct explanation of (A)

182. Stirred-tank bioreactors have been designed for

- (1) Purification of product
- (2) Addition of preservatives to the product
- (3) Availability of oxygen throughout the process
- (4) Ensuring anaerobic conditions in the culture vessel.

183. Which of the following restriction enzymes produces blunt ends :

- | | |
|-----------|--------------|
| (1) Sal I | (2) EcoRV |
| (3) Xho I | (4) Hind III |

184. Research area of biotechnology include

- (1) Providing best catalyst in the improved form of organisms
- (2) Creating optimal conditions for a catalyst to act
- (3) Downstream processing technologies
- (4) All of these

185. The consumption of which one of the following foods can prevent the kind of blindness associated with vitamin 'A' deficiency

- (1) Golden rice
- (2) Bt-Brinjal
- (3) Flavr Savr Tomato
- (4) Canola

186. Use of microorganisms for the disposal of pollutants is termed as

- (1) Integrated organic farming
- (2) Cybernetics
- (3) Bioremediation
- (4) Zero waste

187. Bt toxin is coded by gene

- (1) Bt
- (2) cry
- (3) Btry
- (4) By

188. Recombinant - DNA technology prepared vaccine is called

- (1) First generation vaccine
- (2) Second generation vaccine
- (3) Third generation vaccine
- (4) Vaccine never prepared

v

189. Identify (a), (b), (c) and (d) in the given figure

The pie-chart for number of species of major taxa of invertebrates represent respectively

- (1) (a) - Insects; (b) Crustaceans (c) - Molluscs (d) Other animal groups
- (2) (a) - Other animal groups (b) Molluscs (c) Crustaceans (d) Insects
- (3) (a) Molluscs (b) Insects (c) Other animal groups (d) Crustaceans
- (4) (a) - Insects (b) Molluscs (c) - Crustaceans (d) Other animal groups

190. Chikungunya caused by :

- (1) Bacteria
- (2) Virus
- (3) Fungus
- (4) Protozoa

191. What is the primary mode of chikungunya virus transmission to human :

- (1) Direct contact with infected individuals
- (2) Contaminated water
- (3) Mosquito bites
- (4) Airborne droplets

192. Which joint is most commonly affected by chikungunya related arthritis :

- (1) Knee
- (2) Hip
- (3) Elbow
- (4) Wrist

193. How long does the incubation period for chikungunya typically last :

- (1) 1-2 days
- (2) 5-7 days
- (3) 10-12 days
- (4) 2-3 weeks

194. What is the recommended treatment for chikungunya :

- (1) Antibiotics
- (2) Antiviral drugs
- (3) Supportive care for symptoms
- (4) Vaccination

195. In coconut, liquid nuclear endosperm is surrounded by white kernel which is :

- (1) Integument/seed coat
- (2) Cellular endosperm
- (3) nuclear endosperm
- (4) Fibrous mesocarp

196. Which among the following is odd one :

- (1) Endometrium
- (2) Corpus luteum
- (3) Acrosome
- (4) Graffian follicle

197. Which of the following layers in an antral follicle is acellular :

- (1) Zona pellucida
- (2) Granulosa
- (3) Theca interna
- (4) Stroma

198. The correct match is :

- | | |
|--------------------------------|-----------------------------|
| I. Removal of anther | A. Human blood group |
| II. Laws of inheritance | B. Emasculation |
| III. Multiple allelism | C. Blood group O |
| IV. Universal donor | D. Mendel |

- (1) I-B, II-D, III-A, IV-C
- (2) I-B, II-A, III-D, IV-C
- (3) I-B, II-D, III-C, IV-A
- (4) I-C, II-D, III-A, IV-B

199. Morgan used Drosophila as experimental material because :

- (1) It cannot be reared and breed under lab conditions
- (2) A single mating produces very few offsprings.
- (3) It has high number of morphologically similar chrosomes
- (4) It has a short life span
